

UČNI NAČRT PREDMETA / COURSE SYLLABUS									
Predmet:	Analiza 2a								
Course title:	Analysis 2a								
Študijski program in stopnja Study programme and level	Študijska smer Study field		Letnik Academic year	Semester Semester					
Univerzitetni študijski program Matematika	ni smeri		2	prvi					
First cycle academic study programme Mathematics	none		2	first					
Vrsta predmeta / Course type	obvezni								
Univerzitetna koda predmeta / University course code:	M0253								
Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS			
60		45			135	8			
Nosilec predmeta / Lecturer:	prof. Barbara Drinovec Drnovšek, prof. Franc Forstnerič, prof. Miran Černe								
Jeziki / Languages:	Predavanja / Lectures: slovenski/Slovene Vaje / Tutorial: slovenski/Slovene								
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:								
Opravljen predmet Analiza 1.	Completed course Analysis 1.								
Vsebina:	Content (Syllabus outline):								

Funkcije več spremenljivk. Zveznost. Parcialni odvodi in diferenciabilnost. Jacobijeva matrika in determinanta. Diferencial sestavljeni funkcije. Izrek o implicitni in inverzni preslikavi. Višji parcialni odvodi. Taylorjeva formula. Prosti in vezani ekstremi.	Functions of several variables. Continuity. Partial derivatives and differentiability. Jacobian matrix and determinant. Differential of a composed mapping. Implicit function theorem and inverse function theorem. Higher order partial derivatives. Taylor's formula. Free and constrained extrema.
Integrali s parametrom, zveznost in odvedljivost. Fubinijev izrek. Klasične Fourierove vrste. Fourierova transformacija. Osnovne lastnosti. Inverzna formula. Plancherelov izrek.	Parametric integrals, continuity and differentiability. Fubini's theorem. Classical Fourier series. Fourier transform. Elementary properties. Inverse formula. Plancherel theorem.
Večkratni Riemannov integral. Lastnosti. Množice z ničelnim volumenom in mero. Izrek o obstoju integrala. Prevedba na večkratni integral. Posplošeni integrali. Uporaba integralov v geometriji in fiziki.	Multiple Riemann integral. Properties. Sets with zero volume and measure. Theorem on the existence of integrals. Transformation into a multiple integral. Improper integrals. The use of integrals in geometry and physics.

Temeljni literatura in viri / Readings:

Vidav: Višja Matematika I, DMFA-založništvo, Ljubljana, 1994.
Vidav: Višja Matematika II, DZS, Ljubljana, 1981.
T. M. Apostol: Calculus II : Multi-Variable Calculus and Linear Algebra with Applications, 2nd edition, John Wiley & Sons, New York, 1975.
J. E. Marsden, A. J. Tromba: Vector Calculus, 5th edition, Freeman, New York, 2004.
Suhadolc: Integralske transformacije/Integralske enačbe, DMFA-založništvo, Ljubljana, 1994.
A. Suhadolc: Metrični prostor, Hilbertov prostor, Fourierova analiza, Laplaceova transformacija, DMFA-založništvo, 1998

Cilji in kompetence:

Študent se seznaní z diferencialnim in integralnim računom funkcij več realnih spremenljivk.
--

Objectives and competences:

Student becomes familiar with the differential and the integral calculus of functions of several real variables.
--

Predvideni študijski rezultati:

Intended learning outcomes:

<p>Znanje in razumevanje: Razumevanje diferencialnega in integralskega računa funkcij več spremenljivk ter sorodnih tem. Uporaba razvitih metod v geometriji in naravoslovju.</p> <p>Uporaba: Analiza 2a sodi med temeljne predmete pri študiju matematike vseh usmeritev in je pogoj za vpis predmetov Analiza 3, Teorija mere, Funkcionalna analiza, Verjetnost in statistika, Analiza na mnogoterostih.</p> <p>Refleksija: Razumevanje teorije na podlagi primerov in uporabe.</p> <p>Prenosljive spremnosti – niso vezane le na en predmet: Postavitev problema, izbira primerne metode, reševanje problema, analiza doseženega rezultata na primerih. Formulacija problemov v matematičnem jeziku. Spretnost uporabe domače in tujе literature.</p>	<p>Knowledge and understanding: Understanding of the differential and the integral calculus of functions of several variables and related topics. Application of these methods in geometry and natural science.</p> <p>Application: Analysis 2a is one of the fundamental courses in mathematical studies. It is a prerequisite for the courses Analysis 3, Measure theory, Functional analysis, Probability and statistics, Analysis on manifolds.</p> <p>Reflection: Understanding of the theory based on examples and applications.</p> <p>Transferable skills: The ability to design the problem, select an appropriate method, solve the problem, and analyse the results on test cases. The ability to formulate a problem in mathematical language. Skills in using the domestic and foreign literature.</p>

Metode poučevanja in učenja:

Predavanja, vaje, domače naloge, konzultacije

Learning and teaching methods:

Lectures, exercises, homework, consultations

Delež (v %) /

Načini ocenjevanja:

Weight (in %) **Assessment:**

<p>Način (pisni izpit, ustno izpraševanje, naloge, projekt):</p> <p>2 kolokvija namesto izpita iz vaj, izpit iz vaj,</p> <p>izpit iz teorije</p> <p>ocene: 1-5 (negativno), 6-10 (pozitivno) (po Statutu UL)</p>	<p>50% 50%</p>	<p>Type (examination, oral, coursework, project):</p> <p>2 midterm exams instead of written exam, written exam</p> <p>oral exam</p> <p>grading: 1-5 (fail), 6-10 (pass) (according to the Statute of UL)</p>
