

UČNI NAČRT PREDMETA / COURSE SYLLABUS						
Predmet:		Dinamični sistemi				
Course title:		Dynamical systems				
Študijski program in stopnja Study programme and level		Študijska smer Study field		Letnik Academic year	Semester Semester	
Magistrski študijski program Finančna matematika		ni smeri		1 ali 2	prvi ali drugi	
Master's study programme Financial Mathematics		none		1 or 2	first or second	
Vrsta predmeta / Course type				izbirni		
Univerzitetna koda predmeta / University course code:				M2115		
Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS
30	15	30			105	6
Nosilec predmeta / Lecturer:		prof. Franc Forstnerič, prof. Jasna Prezelj				
Jeziki / Languages:		Predavanja / Lectures: slovenski/Slovene, angleški/English				
		Vaje / Tutorial: slovenski/Slovene, angleški/English				
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:				Prerequisites:		
Vsebina:				Content (Syllabus outline):		

<p>Kvalitativna analiza sistemov nelinearnih diferencialnih enačb. Osnovni izreki o eksistenci in enoličnosti rešitev za sisteme (ponovitve in dopolnitve).</p> <p>Fazni portret avtonomnega sistema. Klasifikacija kritičnih točk, izrek Hartmana in Grobmana o linearizaciji, teorija stabilnosti, metoda Ljapunova.</p> <p>Periodična gibanja in cikli v ravnini. Poincaré-Bendixsonova teorija (topološke osnove, izpeljava in uporaba), izrek Kolmogorova, Hopfova bifurkacija in nastanek ciklov, uvod v kaotično gibanje.</p> <p>Osnove diskretne dinamike. Diferenčne enačbe. Logistična enačba. Klasifikacija fiksnih točk. Podvajanje period in kaos. Heteroklinične orbite in Smalova podkev. Polinomska iteracija v kompleksnem. Juliajeva in Fatoujeva množica. Mandelbrotova množica.</p> <p>Uporaba v fiziki, medicini, biologiji, ekonomiji, elektrotehniki.</p>	<p>Qualitative analysis of systems of nonlinear differential equations. Basic existence and uniqueness theorems for systems (repetition and completion)</p> <p>Phase portraits of autonomous systems. Classification of critical points, Hartman-Grobman linearization theorem, stability theory, Lyapunov method.</p> <p>Periodic motions and cycles in the real plane. Poincaré-Bendixson theory (topological background, proof and examples), Kolmogorov theorem, Hopf bifurcation and emerging of cycles, introduction to chaotic motion.</p> <p>Basic discrete dynamics. Difference equations. The logistic equation. Classification of fixed points. Period doubling and chaos. Heteroclinic orbits and Smale horseshoe. Polynomial iteration in the complex plane. Julia, Fatou and Mandelbrot sets.</p> <p>Examples from physics, medicine, biology, economy, electrical engineering.</p>

Cilji in kompetence:

Objectives and competences:

Študent se seznanja z osnovnimi metodami, ki se uporabljajo pri obravnavi dinamičnih sistemov. Pri tem uporabi znanje iz linearne algebre, diferencialnih enačb in topologije. Spozna različne zglede modeliranja pojavov v medicini, ekonomiji, biologiji in fiziki.

Students learn basic methods used in the theory of dynamical systems. Linear algebra, differential equations and topology are applied. Various examples of modeling from medicine, economy, biology and physics are presented.

Predvideni študijski rezultati:

Znanje in razumevanje: Razumevanje pojmov, kot so: dinamični sistem, stabilnost, periodično gibanje, bifurkacija in kaos.

Uporaba:

Formuliranje, modeliranje in reševanje različnih problemov iz medicine, biologije, fizike in ekonomije.

Refleksija:

Razumevanje teorije na podlagi primerov in uporabe. Številni zgledi pomagajo spoznati vlogo matematike v naravoslovju in tehniki.

Prenosljive spretnosti – niso vezane le na en predmet:

Identifikacija, formulacija in reševanje problemov iz drugih strok v matematičnem jeziku. Spretnost uporabe domače in tuje literature.

Intended learning outcomes:

Knowledge and understanding:

Understanding concepts such as dynamical system, stability, periodic motion, bifurcation, chaos.

Application:

Formulation, modeling and solving various problems in medicine, biology, physics and economy.

Reflection:

Understanding of the theory from the applications. Examples show the role of mathematics in other sciences.

Transferable skills:

Understanding of the theory from the applications. Examples given explain the role of mathematics in natural sciences and engineering.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije

Learning and teaching methods:

Lectures, exercises, homeworks, consultations

Načini ocenjevanja:	Delež (v %) / Weight (in %)	Assessment:
<p>Način (pisni izpit, ustno izpraševanje, naloge, projekt): izpit iz vaj (2 kolokvija ali pisni izpit)</p> <p>ustni izpit</p> <p>domače naloge</p> <p>Ocene: 1-5 (negativno), 6-10 (pozitivno) (po Statutu UL)</p>	<p>33%</p> <p>34%</p> <p>33%</p>	<p>Type (examination, oral, coursework, project): 2 midterm exams instead of written exam, written exam</p> <p>oral exam</p> <p>homeworks</p> <p>Grading: 1-5 (fail), 6-10 (pass) (according to the Statute of UL)</p>
