

UČNI NAČRT PREDMETA / COURSE SYLLABUS						
Predmet:		Mehanika kontinuuma				
Course title:		Continuum mechanics				
Študijski program in stopnja Study programme and level		Študijska smer Study field		Letnik Academic year	Semester Semester	
Magistrski študijski program Finančna matematika		ni smeri		1 ali 2	prvi ali drugi	
Master's study programme Financial Mathematics		none		1 or 2	first or second	
Vrsta predmeta / Course type				izbirni		
Univerzitetna koda predmeta / University course code:				M2121		
Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS
30	15	30			105	6
Nosilec predmeta / Lecturer:		doc. George Mejak				
Jeziki / Languages:		Predavanja / Lectures: slovenski/Slovene, angleški/English				
		Vaje / Tutorial: slovenski/Slovene, angleški/English				
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:				Prerequisites:		
Vsebina:				Content (Syllabus outline):		

<p>Kinematika kontinuuma. Deformacijski gradient. Mere deformacije, deformacijski tenzor. Homogena deformacija, razteg, strig. Deformacija ločnega, površinskega in volumskega elementa. Lagrangeev in Eulerjev opis gibanja. Materialni odvod. Transportni izreki.</p> <p>Ohranitveni zakoni. Zakon o ohranitvi mase. Princip o gibalni količini. Princip o vrtilni količini. Napetostni tenzor. Enačba gibanja. Termodinamika. Energija, entropija. Prvi in drugi zakon termodinamike.</p> <p>Konstitutivne zveze. Princip koordinatne indiferentnosti. Materialne simetrije, izotropija. Reprezentacija konstitucijskih funkcij.</p> <p>Osnovni modeli. Elastičnost, viskoelastičnost, plastičnost, fluidi.</p> <p>Robna naloga. Variacijski principi. Stabilnost ravnovesja. Univerzalne ravnovesne rešitve.</p>	<p>Kinematics of deformation. Deformation gradient. Deformation measures. Deformation tensor. Homogeneous deformation, dilatation, shear. Deformation of arc, surface and volume elements. Lagrangian and Euler description. Material time derivative. Transport theorems.</p> <p>Balance laws. Conservation of mass. Balance of linear momentum. Stress tensor. Balance of angular momentum. Cauchy momentum equation. Thermodynamics. Energy and the first law. Entropy and the second law.</p> <p>Constitutive relations. Material frame indifference. Material symmetry, isotropy. Representation of constitutive functions. Basic models, elasticity, viscoelasticity, plasticity, fluids</p> <p>Boundary value problem. Variational principles. Stability of the equilibrium. Universal equilibrium solutions.</p>

Cilji in kompetence:

Objectives and competences:

Predstavitev osnovnih pojmov in vsebin mehanike kontinuuma s poudarkom na korektni matematični formulaciji in povezovanju predhodno osvojenih matematičnih znanj.

An overview of fundamental facts and ingredients of continuum mechanics with emphasis on correct mathematical formulation based on previously mastered mathematical knowledge.

Predvideni študijski rezultati:

Znanje in razumevanje:
Poznavanje in razumevanje osnovnih pojmov in principov mehanike kontinuuma.

Uporaba:

Osnova za nadaljnje raziskovalno delo in specialistični študij na področju mehanike.

Refleksija:

Povezovanje osvojenega matematičnega znanja v okviru enega predmeta in njegova uporaba na področju mehanike.

Prenosljive spretnosti – niso vezane le na en predmet:

Študentje nadgradijo svoje znanje uporabe matematike za reševanje problemov s področja naravoslovja in tehnike.

Intended learning outcomes:

Knowledge and understanding:
To establish knowledge and understanding of fundamental principles of continuum mechanics.

Application:

Mastered coursework represents a foundation for specialized research in the field of mechanics.

Reflection:

Connecting acquired mathematical knowledge within the course with application of that knowledge in a general field of mechanics.

Transferable skills:

To enhance knowledge and understanding of mathematical methods for solving problems from natural science and technology.

Metode poučevanja in učenja:

Learning and teaching methods:

Predavanja, vaje, uporaba računalniške algebre, domače naloge, konzultacije.	Lectures, exercises, usage of computer algebra, homework and consultations.
--	---

Delež (v %) /

Načini ocenjevanja:

Weight (in %)

Assessment:

Tedenske domače naloge: 50% Zagovor domačih nalog: 50%		Regular homework assignments: 50%. Oral presentation of homework: 50%.
Ocene: 1-5(negativno), 6- 10 (pozitivno) (po Statutu UL)	100%	Grading: 1-5(fail), 6- 10 (pass) (Statute of UL)
