

UČNI NAČRT PREDMETA / COURSE SYLLABUS						
Predmet:		Numerične metode v finančni matematiki				
Course title:		Numerical methods for financial mathematics				
Študijski program in stopnja Study programme and level		Študijska smer Study field		Letnik Academic year	Semester Semester	
Magistrski študijski program Finančna matematika		ni smeri		1 ali 2	prvi ali drugi	
Master's study programme Financial Mathematics		none		1 or 2	first or second	
Vrsta predmeta / Course type				izbirni		
Univerzitetna koda predmeta / University course code:				M2524		
Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS
30	15	30			105	6
Nosilec predmeta / Lecturer:		prof. Jaka Smrekar, prof. Janez Bernik, prof. Marjetka Knez, prof. Mihael Perman, prof. Tomaž Košir				
Jeziki / Languages:		Predavanja / Lectures: slovenski/Slovene, angleški/English				
		Vaje / Tutorial: slovenski/Slovene, angleški/English				
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:				Prerequisites:		
Vsebina:				Content (Syllabus outline):		

<p>Algoritmi za vrednotenje opcij v diskretnem času. Monte Carlo metode za evropske opcije.</p> <p>Simulacije klasičnih porazdelitev. Metoda inverzne transformacije. Izračun matematičnega upanja.</p> <p>Tehnike za zmanjšanja variance. Drevesne metode za evropske in ameriške opcije. Red konvergence v binomskih metodah. Ocenjevanje občutljivosti. Numerični algoritmi za zaščito portfeljev. Drevesne metode in metode Monte Carlo za eksotične opcije (opcije z mejo, azijske opcije, povratne opcije, mavrične opcije).</p> <p>Monte Carlo metode za ameriške opcije.</p> <p>Metode končnih diferenc za Black-Scholesovo parcialno diferencialno enačbo.</p>	<p>Algorithms for option pricing in discrete models. Monte Carlo Methods for European options. Simulation methods of classical law. Inverse transform method. Computation of expectation.</p> <p>Variance reduction techniques. Tree methods for European and American options. Convergence orders of binomial methods. Estimating sensitivities. Numerical algorithms for portfolio insurance. Tree methods and Monte Carlo methods for Exotic options (barrier options, asian options, lookback options, rainbow options).</p> <p>American Monte Carlo methods.</p> <p>Finite difference methods for the Black-Scholes partial differential equation.</p>
---	---

--

Cilji in kompetence:

<p>Predmet pokriva poglavja iz matematičnih financ, ki so pomembna za numerične izračune pri vrednotenju izvedenih finančnih instrumentov vseh vrst.</p> <p>Zaradi nepostredne uporabnosti vsebin bodo pri predmetu sodelovali tudi strokovnjaki iz prakse.</p> <p>V okviru seminarskih/projektnih aktivnosti študentje z individualnim delom in predstavitevijo ter delom v skupinah pridobijo izobraževalno komunikacijske in socialne kompetence za prenos znanj in za vodenje</p>

Objectives and competences:

<p>The course covers the chapter of mathematical finance that deal with numerical methods for pricing of derived financial instruments of all kinds.</p> <p>Since the content is of great practical importance we expect that also specialists from financial practice will present their work experience during the course.</p> <p>With individual presentations and team work interactions within seminar/project activities students acquire communication and social competences for successful team work and</p>

(strokovnega skupinskega dela).

knowledge transfer.

Predvideni študijski rezultati:

Znanje in razumevanje:

Razumevanje matematičnih modelov, ki se uporabljajo v matematičnih financah, in sredstev za njihovo obravnavo.

Uporaba:

Pridobljeno znanje je po eni strani neposredno prenosljivo, po drugi strani pa je izhodišče za kombiniranje matematičnega znanja s finančnimi vsebinami.

Refleksija:

Področje, in s tem posledično predmet, združuje številne znanja iz matematike, predvsem tistih povezanih numeričnimi metodami in teorijo verjetnosti.

Prenosljive spretnosti – niso vezane le na en predmet:

Pridobljeno znanje je neposredno uporabno v finančnih ustanovah.

Intended learning outcomes:

Knowledge and understanding:

Understanding of mathematical models used in finance. Mathematical tools necessary in modelling.

Application:

The knowledge is directly usable in practice, it is also the source for combining of mathematical theories with finance.

Reflection:

The subject connects many mathematical topics, specially those of numerical methods and probability theory, with application.

Transferable skills:

The knowledge is directly applicable in everyday practice in financial institutions.

Metode poučevanja in učenja:

Learning and teaching methods:

predavanja, vaje, domače naloge, konzultacije, seminarske naloge	Lectures, exercises, homeworks, consultations, seminars
--	---

Delež (v %) /

Načini ocenjevanja:

Weight (in %)

Assessment:

Način (pisni izpit, ustno izpraševanje, naloge, projekt): samostojna seminarska naloga		Type (examination, oral, coursework, project): seminar work
ustni izpit		oral exam
Ocene: 1-5 (negativno), 6-10 (pozitivno) (po Statutu UL)	50% 50%	Grading: 1-5 (fail), 6-10 (pass) (according to the Statute of UL)
