Cilji in kompetence:

<p>Predmet predstavlja uvod v teorijo slučajnih procesov v zveznem času z zveznimi trajektorijami. Rigorozno obravnava Brownovo gibanje kot osnovni primer in gradnik, vpelje martingale v zveznem času, Itôv stohastični račun in Itovo formulo.</p>

Objectives and competences:

<p>This course is an introduction to the theory of stochastic processes in continuous time with continuous sample paths. It rigorously treats Brownian motion as a basic example and building block, introduces martingales in continuous time, stochastic calculus and</p>

Ito's formula.

Predvideni študijski rezultati:

Znanje in razumevanje: Matematična orodja za strogo obravnavo in uporabo slučajnih procesov. Uporaba: Osnova za modeliranje v mnogih vejah matematike in njene uporabe. Refleksija: Vsebina predmeta pomaga za nazaj poglobiti razumevanje konceptov verjetnosti, koncepta odvisnosti in časa. Prenosljive spretnosti – niso vezane le na en predmet: Spretnosti so prenosljive na druga področja matematičnega modeliranja, še najbolj pa je predmet pomemben zaradi svoje neposredne uporabnosti pri finančnem modeliranju.

Intended learning outcomes:

Knowledge and understanding: Mathematical tools for rigorous treatment and applications of stochastic processes. Application: Basic tools for modelling in many branches of Mathematics and its applications. Reflection: The contents of the course help in retrospect to deepen the understanding of the concepts of probability, dependence and time. Transferable skills: The skills acquired are transferable to other areas of mathematical modelling, in particular it is immediately applicable to financial models.
