Predavatelj/ica izbere nekatere pomembne teme iz diskretne matematike, kot npr.: Delno urejene množice. Ramseyeva teorija. Matroidi. Diskretna geometrija. Načrti in konfiguracije.				The lecturer selects some important topics in discrete mathematics, such as: Partially ordered sets. Ramsey theory. Matroids. Discrete geometry. Designs and configurations.		

<p>Simetrični grafi. Simetrije kombinatoričnih objektov. Simetrične funkcije. Kombinatorno preštevanje. Diskretna verjetnost. Metrična teorija grafov. Teorija dominacije. Problem hanojskega stolpa.</p> <p>Pri tem si prizadeva minimizirati prekrivanje z drugimi predmeti tega študijskega programa.</p>	<p>Symmetric graphs. Symmetries of combinatorial objects. Symmetric functions. Combinatorial enumeration. Discrete probability. Metric graph theory. Domination theory. The Tower of Hanoi problem.</p> <p>Special care should be taken to minimize overlap with other courses in this program.</p>

Objectives and competences:

<p>Students encounter some of the important areas of discrete mathematics, such as partially ordered sets, discrete geometry, discrete probability, partitions, and symmetric functions. With individual presentations and team work interactions within seminar/project activities students acquire communication and social competences for successful team work and knowledge transfer.</p>
