**Cilji in kompetence:**

Študent nadgradi poznavanje podatkovnih struktur in z njimi povezanih algoritmov, ki se uporabljajo pri načrtovanju učinkovitih algoritmov. Ob tem poglobi znanje o matematični analizi pravilnosti ter časovne in prostorske zahtevnosti algoritmov.

**Objectives and competences:**

The students improve their knowledge of data structures and related algorithmic techniques used in the design of efficient algorithms. They also develop the knowledge of mathematical analysis for the correctness and the time/space complexity of algorithms.

**Predvideni študijski rezultati:**

Znanje in razumevanje: Poznavanje zahtevnejših podatkovnih struktur in algoritmov, praktičnih in teoretičnih problemov, pri katerih se jih lahko smiselno uporabi, ter poznavanje osnov teorije računske zahtevnosti.

Uporaba: Snovanje učinkovitih računalniških programov in napovedovanje njihovega obnašanja v praksi s pomočjo matematičnih metod.

Refleksija: Povezanost med teoretičnimi napovedmi o obnašanju računalniških programov in dejanskim obnašanjem.

Prenosljive spretnosti – niso vezane le na en predmet: Pomen matematične analize računskih postopkov in njena praktična uporabnost. Ločevanje med računsko zahtevnimi in manj zahtevnimi problemi.

**Intended learning outcomes:**

Knowledge and understanding: Learning more about complex data structures and algorithms, practical and theoretical problems where this knowledge can be applied, and the basics of computational complexity. Application: The design of efficient computer programs and prediction of their behavior in practice by using mathematical methods. Reflection: The correlation between theoretical predictions about the behavior of computer programs and their actual behavior.

Transferable skills: The importance of mathematical analysis of computational processes and its practical application. Classification into difficult and less complex problems.

**Metode poučevanja in učenja:**

predavanja, seminar, vaje, domače naloge, konzultacije in samostojno delo študentov

**Learning and teaching methods:**

Lectures, seminar, exercises, homework, consultations and independent work by the students
