**Cilji in kompetence:**

**Objectives and competences:**

Študent spozna glavne tehnike kombinatornega preštevanja.

The student learns the main techniques of enumerative combinatorics.

**Predvideni študijski rezultati:**

Znanje in razumevanje: Študentje poznajo in razumejo vlogo rodovnih funkcij in algebrskih struktur pri študiranju kombinatornih problemov.  
Uporaba: Študentje znajo uporabljati teorijo rodovnih funkcij in algebrskih struktur za reševanje kombinatornih problemov.  
Refleksija: Študentje spoznajo povezavo med strukturo kombinatornega problema in algebraično naravo pripadajočih rodovnih funkcij oziroma drugih struktur.  
Prenosljive spretnosti – niso vezane le na en predmet: Uporaba rodovnih funkcij v verjetnosti, poglobljeno razumevanje klasične Möbiusove funkcije, delovanje grup na množici.

**Intended learning outcomes:**

Knowledge and understanding: Students understand the role of generating functions and algebraic structures in the study of combinatorial problems.  
Application: Students know how to use generating functions and algebraic structures to solve combinatorial problems.  
Reflection: The students learn the connection between the structure of the combinatorial problem and the algebraic nature of the corresponding generating functions and other structures.  
Transferable skills: Applications of generating functions in probability, a deeper understanding of the classical Möbius function, action of a group on a set.

**Metode poučevanja in učenja:**

predavanja, vaje, domače naloge, konzultacije

**Learning and teaching methods:**

lectures, exercises, homeworks, consultations

**Načini ocenjevanja:**

Način (pisni izpit, ustno izpraševanje, naloge, projekt):  
izpit iz vaj (2 kolokvija ali pisni izpit)  
ustni izpit  
Ocene: 1-5 (negativno), 6-10
