

UČNI NAČRT PREDMETA / COURSE SYLLABUS											
Predmet:	Modeliranje s slučajnimi procesi										
Course title:	Modelling with stochastic processes										
Študijski program in stopnja Study programme and level	Študijska smer Study field		Letnik Academic year	Semester Semester							
Magistrski študijski program Finančna matematika	ni smeri		1 ali 2	prvi ali drugi							
Master's study programme Financial Mathematics	none		1 or 2	first or second							
Vrsta predmeta / Course type	izbirni										
Univerzitetna koda predmeta / University course code:	M2528										
Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS					
30	15	30			105	6					
Nosilec predmeta / Lecturer:	prof. Janez Bernik										
Jeziki / Languages:	Predavanja / Lectures:	slovenski/Slovene, angleški/English									
	Vaje / Tutorial:	slovenski/Slovene, angleški/English									
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:										
Vsebina:	Content (Syllabus outline):										

Aktuarski del:	Actuarial part: Lundbergov proces, verjetnosti bankrota, martingalske metode, verjetnosti bankrota v končnem času, poslošitve Lundbergovega modela.
	Modeliranje z markovskimi verigami, enačbe Kolmogorova, Thielejeve diferencialne enačbe, izračun matematičnih rezervacij, zvarovalni produkti z izplačili odvisnimi od matematičnih rezervacij, vpeljava slučajnih obrestnih mer z markovskimi verigami.
Finančni del:	Markov chain models, Kolmogorov equations, Thiele differential equation, mathematical reserves calculation, reserves dependent payoffs, stochastic interest rates via Markov chains. Financial part:
Optimalna kontrola: formulacija problema, Hamilton-Jacobi-Bellmanove enačbe, linearni regulator, primeri uporabe.	Optimal control: formulation of the problem, Hamilton-Jacobi-Bellman equations, linear regulator, applications.
Optimalno ustavljanje: formulacija problema, primeri, ameriške opcije.	Optimal stopping: formulation of the problem, examples, American options.
Osnovni izrek vrednotenja opcij: formulacija, dokaz, enačbe za varovanje, povezava s parcialnimi diferencialnimi enačbami, primeri nekompletih trgov.	Fundamental theorem of asset pricing: formulation, proof, hedging equations, connections to partial differential equations, examples of incomplete markets.
Nekompletni trgi: Lévyjevi modeli, super-varovanje, vrednotenje, optimizacija.	Incomplete markets: Lévy models, superhedging, pricing, optimization.

Cilji in kompetence:

Slučajni procesi so osnova za številne modele, ki se uporabljajo v finančnem in aktuarskem svetu. Tečaj se navezuje na teoretična tečaja iz slučajnih procesov in po eni strani odpira pot do uporabe, po drugi pa na drugačen način osvetli teoretične osnove.

Zaradi neposredne uporabnosti vsebin bodo pri predmetu sodelovali tudi strokovnjaki iz prakse.

Objectives and competences:

Stochastic processes form a basis for numerous models in finance and insurance. The course links theoretical parts learned in other courses on stochastic processes by showing their applications on one side and elucidates the theoretical background on the other.

Since the content is of great practical importance we expect that also specialists from financial practice will present their work experience during the course.

Predvideni študijski rezultati:

Znanje in razumevanje: Razumevanje modeliranja s slučajnimi procesi v financah in aktuarstvu in razumevanja matematičnih orodij in predpostavk.

Uporaba: Uporaba je neposredna, saj so obravnavani modeli izhodišče za vrednotenje mnogih finančnih in zavarovalnih produktov.

Refleksija: Uporaba slučajnih procesov utrdi znanje iz verjetnosti in slučajnih procesov po eni strani, po drugi pa odpira pot do praktične uporabe teorije slučajnih procesov.

Prenosljive spretnosti – niso vezane le na en predmet: Spretnosti so prenosljive na druga področja matematičnega modeliranja, še najbolj pa je predmet pomemben zaradi svoje neposredne uporabnosti.

Intended learning outcomes:

Knowledge and understanding: Understanding of stochastic modelling in finance and insurance and understanding of mathematical framework. Application: Application is immediate as the models under consideration form a basis for

Pricing many financial and insurance products.

Reflection: The application of stochastic processes deepens the knowledge of probability calculus and stochastic processes and paves the way for their application.

Transferable skills: The skills obtained are transferable to other areas of mathematical modelling, but the gist of the course is its immediate applicability.

--	--

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije, seminarske naloge

Learning and teaching methods:

Lectures, exercises, homeworks, consultations, seminars

Načini ocenjevanja:	Delež (v %) / Weight (in %)	Assessment:
Način (pisni izpit, ustno izpraševanje, naloge, projekt): samostojna seminarska naloga ustni izpit		Type (examination, oral, coursework, project): seminar work oral exam
Ocene: 1-5 (negativno), 6-10 (pozitivno) (po Statutu UL)	50% 50%	Grading: 1-5 (fail), 6-10 (pass) (according to the Statute of UL)
