

UČNI NAČRT PREDMETA / COURSE SYLLABUS							
Predmet:		Računska zahtevnost					
Course title:		Computational complexity					
Študijski program in stopnja Study programme and level		Študijska smer Study field			Letnik Academic year		Semester Semester
Magistrski študijski program Finančna matematika		ni smeri			1 ali 2		prvi ali drugi
Master's study programme Financial Mathematics		none			1 or 2		first or second
Vrsta predmeta / Course type					izbirni		
Univerzitetna koda predmeta / University course code:					M2610		
Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS	
30	15	30			105	6	
Nosilec predmeta / Lecturer:		prof. Marko Petkovšek, prof. Sergio Cabello Justo					
Jeziki / Languages:		Predavanja / Lectures: slovenski/Slovene, angleški/English					
		Vaje / Tutorial: slovenski/Slovene, angleški/English					
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:				Prerequisites:			
Vsebina:				Content (Syllabus outline):			

<p>Modeli računanja. Časovna in prostorska zahtevnost. Determinizem in nedeterminizem. Redukcije in polnost.</p> <p>Fenomen NP-polnosti. Nekaj izbranih NP-polnih problemov. Tehnike dokazovanja NP-polnosti. Struktura razreda NP.</p> <p>Verjetnostni algoritmi. Vrste verjetnostnih algoritmov. Verjetnostni razredi zahtevnosti. Generatorji psevdonaključnosti.</p> <p>Aproksimativni algoritmi. Kakovost aproksimacije. Težavnost aproksimacije. Aproksimacijske sheme. Nekaj izbranih aproksimacijskih algoritmov.</p> <p>Dodatno vsebino lahko predavatelj izbere med naslednjimi temami: Booleova vezja, interaktivni dokazi, kvantno računalništvo, izreki PCP, komunikacijska zahtevnost, parametrična zahtevnost.</p>	<p>Models of computation. Time and space complexity. Determinism and nondeterminism. Reductions and completeness.</p> <p>NP-completeness. Some selected NP-complete problems. Techniques to prove NP-completeness. Structure of the class NP.</p> <p>Probabilistic algorithms. Types of probabilistic algorithms. Related computational classes. Pseudorandom generators.</p> <p>Approximation algorithms. Quality of approximation. Hardness of approximation. Approximation schemes. Selected approximation algorithms.</p> <p>Additional content may be selected among the following topics: Boolean circuits, interactive proofs, quantum computing, PCP theorems, communication complexity, parameterized complexity.</p>
---	--

Temeljni literatura in viri / Readings:

S. Arora, B. Barak: Computational Complexity: A Modern Approach, Cambridge University Press, 2009.

M. R. Garey, D. S. Johnson: Computers and intractability. A guide to the theory of NP-completeness, W. H. Freeman and Co., 2003.

R. Motwani, P. Raghavan: Randomized Algorithms, Cambridge University Press, Cambridge, 1995.

V. V. Vazirani: Approximation algorithms, Springer-Verlag, 2001.

Cilji in kompetence:

Študent se seznani z osnovnimi modeli računanja, teorijo NP-polnosti, verjetnostnimi algoritmi in z reševanjem težkih problemov z aproksimativnimi algoritmi.

Objectives and competences:

Students become acquainted with the basic models of computation, the theory of NP-completeness, probabilistic algorithms, and with solving hard problems approximately.

Predvideni študijski rezultati:

Intended learning outcomes:

Znanje in razumevanje: Študentje poznajo: povezave med modeli računanja

teorijo NP-polnosti

pojmem verjetnostnega algoritma

pojmem aproksimativnega algoritma

Uporaba: Študentje znajo:

analizirati časovno zahtevnost algoritmov

dokazovati NP-polnost

načrtovati verjetnostne algoritme

načrtovati aproksimativne algoritme

Refleksija: Študentje spoznajo:

hierarhijo problemov glede na njihovo časovno zahtevnost

inherentno težke probleme

relaksacijske pristope k reševanju težkih problemov

Prenosljive spretnosti – niso vezane le na en predmet: Analiza težavnosti problemov s pomočjo redukcij med njimi.

Knowledge and understanding: The students understand: connections between models of computation, theory of NP-completeness, the concept of probabilistic algorithm, the concept of approximation algorithm.

Application: The students are able to: analyze time complexity of algorithms, prove NP-completeness, design probabilistic algorithms, design approximation algorithms.

Reflection: The students meet: problem hierarchies by time complexity, inherently hard problems, relaxations to solve hard problems.

Transferable skills: Analysis of the hardness of problems using reductions between them.

Metode poučevanja in učenja:

Learning and teaching methods:

predavanja, seminar, vaje, domače naloge, konzultacije in samostojno delo študentov

Lectures, seminar, exercises, homework, consultations and independent work by the students

Delež (v %) /

Weight (in %)

Assessment:

Načini ocenjevanja:

Način: izpit iz vaj (2 kolokvija ali pisni izpit) or homework
Ocene: 1-5 (negativno), 6-10 (pozitivno) (po Statutu UL)

50%
50%

Type:
exam of exercises (2 midterm exams or written exam) or homework

oral exam.

Grading: 1-5 (fail), 6-10 (pass) (according to the Statute of UL)
