

UČNI NAČRT PREDMETA / COURSE SYLLABUS											
Predmet:	Teorija grup in polgrup										
Course title:	Theory of semigroups and groups										
Študijski program in stopnja Study programme and level	Študijska smer Study field		Letnik Academic year	Semester Semester							
Magistrski študijski program Finančna matematika	ni smeri		1 ali 2	prvi ali drugi							
Master's study programme Financial Mathematics	none		1 or 2	first or second							
Vrsta predmeta / Course type	izbirni										
Univerzitetna koda predmeta / University course code:	M2212										
Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS					
45		30			105	6					
Nosilec predmeta / Lecturer:	prof. Jakob Cimprič, prof. Primož Moravec, prof. Primož Potočnik, prof. Tomaž Košir										
Jeziki / Languages:	Predavanja / Lectures:	slovenski/Slovene, angleški/English									
	Vaje / Tutorial:	slovenski/Slovene, angleški/English									
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:										
Vsebina:	Content (Syllabus outline):										

<p>I. Teorija polgrup</p> <p>Osnovni pojmi teorije polgrup, primeri polgrup.</p> <p>Greenove relacije.</p> <p>Regularne polgrupe, polgrupe z obrati.</p> <p>Enostavne polgrupe, povsem enostavne polgrupe.</p> <p>II. Teorija grup</p> <p>Ponovitev osnovnih pojmov teorije grup.</p> <p>Kompozicijska vrsta in Jordan-Hölderjev izrek. Rešljive grupe. Hallov izrek za rešljive grupe. Nilpotentne grupe, p-grupe.</p> <p>Razcepne in nerazcepne razširitve grup, semidirektni produkt grup, Schur-Zassenhausov izrek.</p> <p>Končne enostavne grupe in problem njihove klasifikacije. Klasične grupe (splošne linearne, simplektične, unitarne in ortogonalne) ter pripadajoče enostavne grupe.</p> <p>Osnove teorije upodobitev končnih grup. Teorija karakterjev.</p>	<p>I. Semigroup theory basic notions and examples</p> <p>Green relations</p> <p>Regular semigroups, inverse semigroups.</p> <p>Simple semigroups, completely simple semigroups.</p> <p>II. Group theory</p> <p>Basic notions</p> <p>Composition series, Jordan-Hölder theorem. Solvable groups, Hall's theorem. Nilpotent groups, p-groups.</p> <p>Split and non-split extensions of groups, semidirect product, Schur-Zassenhaus theorem.</p> <p>Finite simple groups and the classification problem. Classical groups (general linear, symplectic, unitary and orthogonal) and the corresponding simple groups.</p> <p>Fundamentals of representation theory of finite groups. Character theory.</p>
---	--

Temeljni literatura in viri / Readings:

J. M. Howie: Fundamentals of semigroup theory, Oxford University Press, Oxford, 1995.

P. M. Higgins: Techniques of semigroup theory, Oxford University Press, Oxford, 1992.

J. J. Rotman: An introduction to the theory of groups, 4. izd., Springer New York 1995.

D. J. S. Robinson: A course in the theory of groups, 2. izd., Springer New York, 1996.

Cilji in kompetence:

Objectives and competences:

Študent spozna osnovne pojme iz teorije polgrup in grup ter njihovo povezanost z drugimi področji matematike.

Students get acquainted with basic notions of group theory and semigroup theory. They get familiar with connections between these two theories and other areas of mathematics.

Predvideni študijski rezultati:

Znanje in razumevanje:

Poznavanje osnovnih pojmov in izrekov teorije polgrup in grup in njihovo prepoznavanje v drugih vejah matematike.

Uporaba:

Teorija polgrup in grup spada med temeljne matematične predmete. Uči nas prepoznavati simetrije v naravi. Uporablja se zlasti v fiziki in kemiji (na primer kristalografija). Znotraj matematike je uporabna v geometriji, asociativni algebri, funkcionalni analizi in teoriji števil.

Refleksija:

Razumevanje teorije na podlagi primerov in uporabe.

Prenosljive spretnosti – niso vezane le na en predmet:

Formulacija problemov v primerinem jeziku, reševanje in analiza doseženega na primerih, prepoznavanje grup v geometriji in analizi.

Intended learning outcomes:

Knowledge and understanding:

Basic notions of group theory and semigroup theory, applications in other areas of mathematics.

Application:

Group theory and semigroup theory are classical mathematical disciplines. They teach us how to recognize symmetries. They have immense applications in physics and chemistry (crystallography). Within mathematics, they play an important role in geometry, associative algebra, functional analysis, and number theory.

Reflection:

Understanding theory based on examples and applications.

Transferable skills:

Formulation of problems, solving problems and analysis of results using examples, applying groups in geometry and analysis.

Metode poučevanja in učenja:

Learning and teaching methods:

predavanja, vaje, domače naloge, konzultacije	Lectures, exercises, homeworks, consultations
---	---

Načini ocenjevanja:	Delež (v %) / Weight (in %)	Assessment:
<p>Način (pisni izpit, ustno izpraševanje, naloge, projekt): izpit iz vaj (2 kolokvija ali pisni izpit) ustni izpit Ocene: 1-5 (negativno), 6-10 (pozitivno) (po Statutu UL)</p>	<p>50% 50%</p>	<p>Type (examination, oral, coursework, project): 2 midterm exams instead of written exam, written exam oral exam Grading: 1-5 (fail), 6-10 (pass) (according to the Statute of UL)</p>
