

UČNI NAČRT PREDMETA / COURSE SYLLABUS									
Predmet:	Teorija mere								
Course title:	Measure theory								
Študijski program in stopnja Study programme and level	Študijska smer Study field		Letnik Academic year	Semester Semester					
Magistrski študijski program Finančna matematika	ni smeri		1 ali 2	prvi ali drugi					
Master's study programme Financial Mathematics	none		1 or 2	first or second					
Vrsta predmeta / Course type	izbirni								
Univerzitetna koda predmeta / University course code:	M2110								
Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS			
45		30			105	6			
Nosilec predmeta / Lecturer:	doc. Marko Kandić, prof. Bojan Peter Magajna, prof. Roman Drnovšek								
Jeziki / Languages:	Predavanja / Lectures: slovenski/Slovene, angleški/English Vaje / Tutorial: slovenski/Slovene, angleški/English								
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:								
Vsebina:	Content (Syllabus outline):								

<p>Mere: <math>\sigma</math>-algebре, pozitivne mere, zunanje mere, Caratheodoryjev izrek, razširitev mere iz algebре на sigma alгеbro, Borelove mere на <math>R</math>, Lebesguova мера на <math>R</math>.</p> <p>Merljive функције: апроксимација с стопниčастими функцијами, начини конвергенции функцијских запоредјаја, изрек Јегорова.</p> <p>Интеграција: интеграл ненегативне функције, изрек о монотони конвергенци, Фатоујева лема, интеграл комплексне функције, изрек о доминирани конвергенци, primerjava Riemannovega и Lebesguovega интеграла, изрек Јегорова.</p> <p>Производне mere: конструкција производних мер, монотони разреди, Tonelliјев и Fubiniјев изрек, Lebesguов интеграл на <math>R^n</math>.</p> <p>Комплексне mere: предзначена mere, Hahnов и Jordanов разцеп, комплексне mere, варијација mere, абсолютна звездност и взајемна singularnost, Lebesgue-Radon-Nikodymov изрек.</p> <p><math>L^p</math>-простори: неенакости Jensea, Hölderja и Minkowskega, омејени линеарни функционали, дупални простори.</p> <p>Интегрирање на локално компактних простори: pozitivni линеарни функционали на <math>C_c(X)</math>, Radonove mere, Rieszov izrek, Lusinov izrek, gostost простора <math>C_c(X)</math> в <math>L^p</math>-простори.</p> <p>Одвајање мер на <math>R^n</math>: одвајање мер, абсолютно зvezne и функције с ограничено totalno варијација.</p>	<p>Measures: <math>\sigma</math>-algebras, positive measures, outer measures, Caratheodory's theorem, extension of measures from algebras to <math>\sigma</math>-algebras, Borel measures on <math>R</math>, Lebesgue measure on <math>R</math>.</p> <p>Measurable functions: approximation by step functions, modes of convergence of sequences of functions, Egoroff's theorem.</p> <p>Integration: integration of nonnegative functions, Lebesgue monotone convergence theorem, Fatou's lemma, integration of complex functions, Lebesgue dominated convergence theorem, comparison with Riemann's integral.</p> <p>Product measures: construction of product measures, monotone classes, Tonelli's and Fubini's theorem, the Lebesgue integral on <math>R^n</math>.</p> <p>Complex measures: signed measures, the Hahn and the Jordan decomposition, complex measures, variation of a measure, absolute continuity and mutual singularity, the Lebesgue-Radon-Nikodym theorem.</p> <p><math>L^p</math>-spaces: inequalities of Jensen, Hölder and Minkowski, bounded linear functionals, dual spaces.</p> <p>Integration on locally compact spaces: positive linear functionals on <math>C_c(X)</math>, Radon measures, Riesz representation theorem, Lusin's theorem, density of <math>C_c(X)</math> in <math>L^p</math>-spaces.</p> <p>Differentiation of measures on <math>R^n</math>: differentiation of measures, absolutely continuous and functions of bounded variation.</p>

- R. Drnovšek: Rešene naloge iz teorije mere, DMFA-založništvo, Ljubljana, 2001.
- G. B. Folland: Real Analysis : Modern Techniques and Their Applications, 2nd edition, John Wiley & Sons, New York, 1999.
- M. Hladnik: Naloge in primeri iz funkcionalne analize in teorije mere, DMFA-založništvo, Ljubljana, 1985.
- S. Kantorovitz: Introduction to Modern Analysis, Oxford Univ. Press, 2003.
- B. Magajna: Osnove teorije mere, DMFA-založništvo, Ljubljana, 2011.
- W. Rudin: Real and Complex Analysis, 3rd edition, McGraw-Hill, New York, 1987.

**Cilji in kompetence:**

Študent pridobi znanje osnov teorije mere, ki jih potrebuje za razumevanje osnov sodobnega verjetnostnega računa, statistike in funkcionalne analize.

**Objectives and competences:**

Students acquire basic knowledge of measure theory needed to understand probability theory, statistics and functional analysis.

**Predvideni študijski rezultati:**

Znanje in razumevanje: Razumevanje osnovnih pojmov teorije mere.

Uporaba: Teorija mere sodi med temeljne predmete na 2. stopnji študija matematike, saj je nujno potrebna za razumevanje osnov sodobnega verjetnostnega računa, statistike in funkcionalne analize. Poleg tega njena uporaba sega tudi v naravoslovje in druga področja znanosti kot na primer ekonomijo.

Refleksija: Razumevanje teorije na podlagi primerov uporabe.

Prenosljive spretnosti – niso vezane le na en predmet: Sposobnost abstraktnega razmišljanja. Spretnost uporabe domače in tujje literature.

**Intended learning outcomes:**

Knowledge and understanding: understanding basic concepts of measure and integration theory.

Application: measure theory is a part of the basic curriculum of the graduate study of mathematics since it is needed in other areas, for example, in probability calculus, statistics and functional analysis. It is useful also in other sciences, for example in economy.

Reflection: understanding of the theory on the basis of examples of application.

Transferable skills: Ability to use abstract methods to solve problems. Ability to use a wide range of references and critical thinking.

--	--

**Metode poučevanja in učenja:**

predavanja, vaje, domače naloge, konzultacije

**Learning and teaching methods:**

Lectures, exercises, homeworks, consultations

<b>Načini ocenjevanja:</b>	<b>Delež (v %) / Weight (in %)</b>	<b>Assessment:</b>
Način (pisni izpit, ustno izpraševanje, naloge, projekt): izpit iz vaj (2 kolokvija ali pisni izpit) ustni izpit Ocene: 5 (negativno), 6-10 (pozitivno) (po Statutu UL)	50% 50%	Type (examination, oral, coursework, project): 2 midterm exams instead of written exam, written exam oral exam Grading: 5 (fail), 6-10 (pass) (according to the Statute of UL)
