

UČNI NAČRT PREDMETA / COURSE SYLLABUS						
Predmet:		Teorija programskih jezikov				
Course title:		Theory of programming languages				
Študijski program in stopnja Study programme and level		Študijska smer Study field		Letnik Academic year		Semester Semester
Interdisciplinarni magistrski študijski program Računalništvo in matematika		ni smeri		1 ali 2		prvi ali drugi
Interdisciplinary Masters study programme Computer Science and Mathematics		none		1 or 2		first or second
Vrsta predmeta / Course type				izbirni		
Univerzitetna koda predmeta / University course code:				M2820		
Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS
45		30			105	6
Nosilec predmeta / Lecturer:		doc. Matija Pretnar, prof. Alexander Keith Simpson, prof. Andrej Bauer				
Jeziki / Languages:	Predavanja / Lectures:	slovenski/Slovene, angleški/English				
	Vaje / Tutorial:	slovenski/Slovene, angleški/English				
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:				Prerequisites:		
Vsebina:				Content (Syllabus outline):		

<p>Pri predmetu se obravnava teorija programskih jezikov s poudarkom na uporabi matematičnih metod pri podajanju jezikov in analizi njihovih lastnosti. Obravnavajo se naslednje teme:</p> <ul style="list-style-type: none"> - konkretna in abstraktna sintaksa, - induktivne definicije, definicije - dokazovanje s strukturno indukcijo - induktivni podatkovni tipi kot - operacijska semantika kot - funkcijski programski jeziki: - polimorfizem, parametrični - ukazni programski jeziki, - denotacijska semantika: domene in - izbirne vsebine: objektni leksična in gramatična analiza kot prevajanje konkretne v abstraktno 	<p>The course covers the theory of programming languages with emphasis on mathematical methods for specification of programming languages and analysis of their properties. The following topics are covered:</p> <ul style="list-style-type: none"> - concrete and abstract syntax, lexical analysis and parsing as translation of concrete syntax to abstract syntax - inductive definitions, definitions given in terms of judgements and rules of inference - proofs by structural induction on abstract syntax and on the structure of a derivation - inductive datatypes as an example of use of structural definitions and

Cilji in kompetence:

Objectives and competences:

Cilj predmeta je predstavitev modernega, matematičnega pristopa, k teoriji programskih jezikov. Študenti pridobijo sposobnost analize programskih jezikov ter osnovnih konceptov povezanih z njimi.

The objective of the course is to present modern, mathematical approach to theory of programming languages. Students will attain the ability to analyze programming languages and the basic concepts related to them.

Predvideni študijski rezultati:

Znanje in razumevanje:
 Slušatelji se naučijo, kako načrtujemo in analiziramo programske jezike s formalnimi matematičnimi metodami.

Intended learning outcomes:

Knowledge and understanding:
 Students learn how to design and analyze programming languages with formal mathematical methods.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge

Learning and teaching methods:

lectures, tutorials, homeworks

Načini ocenjevanja:

domače naloge, kolokviji, projekti, pisni izpit, ustni izpit
 ocene: 5 (negativno), 6-10 (pozitivno) (po Statutu UL)

Delež (v %) /

Weight (in %) **Assessment:**

100%

homework, midterm exams, projects, written exam, oral exam

		grading: 5 (fail), 6-10 (pass) (according to the Statute of UL)
