Cilji in kompetence:	**Objectives and competences:**
Cilj predmeta je študentom predstaviti nekatere najbolj aktualne metode in platforme	The main goal of the course is to present recent unconventional methods and platforms for

procesiranja z vidika bazičnih sestavnih struktur, ki se danes uveljavljajo kot možne alternative klasičnim električno tranzistorskim dvovrednostnim logičnim strukturam. Razvoj slednjih bo drastično upočasnjen zaradi problemov tendenc miniaturizacije, saj jim bo tehnologija s svojimi rešitvami vse težje sledila. Ostale kompetence: Zmožnost definiranja, razumevanja in reševanja profesionalnih izzivov Zmožnost iskanja novih virov znanj in njihova kritična evaluacija	computer processing needs. The motivation for the course comes from the restrictions in the field of minimization of classical computer structures. Other competences: The ability to define, understand and solve creative professional challenges in computer and information science, The ability to search knowledge sources and to search for resources and critically evaluate information.
Predvideni študijski rezultati:	**Intended learning outcomes:**
Po uspešnem zaključku tega predmeta bo študent: sposoben kritične analitične obravnave načina delovanja obstoječih platform in metod procesiranja, razumel koncept reverzibilnosti logičnih funkcij, poznal in znal uporabljati koncepte porazdeljenih sistemov celularnih avtomatov in kvantnih celularnih avtomatov, razumel in znal uporabljati koncepte večvrednostnih logik in procesiranja, razumel koncepte biološkega procesiranja, razumel koncepte kvantnega procesiranja, sposoben obravnave in reševanja problema na osnovi alternativnih metod procesiranja.	After the completion of the course a student: - will be able to objectively analyse the existing processing platforms and methods, - will be able to understand the concept of logic functions reversibility, - will be familiar with the concepts of distributed systems, such as cellular automata and quantum-dot cellular automata, - will understand and will be able to apply the concepts of a many-valued logic and processing in practice, - will understand the concepts of biological computing, - will understand the concepts of quantum computing, - will be able to solve problems on the basis of alternative processing methods.
