

UČNI NAČRT PREDMETA / COURSE SYLLABUS (leto / year 2017/18)						
Predmet:		Modeliranje s slučajnimi procesi				
Course title:		Modelling with stochastic processes				
Študijski program in stopnja Study programme and level		Študijska smer Study field		Letnik Academic year	Semester Semester	
Magistrski študijski program Matematika		ni smeri		1 ali 2	prvi ali drugi	
Master's study programme Mathematics		none		1 or 2	first or second	
Vrsta predmeta / Course type				izbirni / elective		
Univerzitetna koda predmeta / University course code:				M2528		
Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS
30	15	30			105	6
Nosilec predmeta / Lecturer:		prof. dr. Janez Bernik				
Jeziki / Languages:		Predavanja / Lectures: slovenski / Slovene, angleški / English				
		Vaje / Tutorial: slovenski / Slovene, angleški / English				
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:			Prerequisites:			
Vpis v letnik študija.			Enrolment in the programme.			
Vsebina:			Content (Syllabus outline):			

<p>Aktuarski del:</p> <p>Lundbergov proces, verjetnosti bankrota, martingalske metode, verjetnosti bankrota v končnem času, posplošitve Lundbergovega modela.</p> <p>Modeliranje z markovskimi verigami, enačbe Kolmogorova, Thielejeve diferencialne enačbe, izračun matematičnih rezervacij, zvarovalni produkti z izplačili odvisnimi od matematičnih rezervacij, vpeljava slučajnih obrestnih mer z markovskimi verigami.</p> <p>Finančni del:</p> <p>Optimalna kontrola: formulacija problema, Hamilton-Jacobi-Bellmanove enačbe, linearni regulator, primeri uporabe.</p> <p>Optimalno ustavljanje: formulacija problema, primeri, ameriške opcije.</p> <p>Osnovni izrek vrednotenja opcij: formulacija, dokaz, enačbe za varovanje, povezava s parcialnimi diferencialnimi enačbami, primeri nekompletnih trgov.</p> <p>Nekompletni trgi: Lévyjevi modeli, super-varovanje, vrednotenje, optimizacija.</p>	<p>Actuarial part:</p> <p>Lundberg process, the probability of ruin, martingale methods, the probability of ruin in finite time, generalized Lundberg model.</p> <p>Markov chain models, Kolmogorov equations,</p> <p>Thiele differential equation, mathematical reserves calculation, reserves dependent payoffs, stochastic interest rates via Markov chains.</p> <p>Financial part:</p> <p>Optimal control: formulation of the problem, Hamilton-Jacobi-Bellman equations, linear regulator, applications.</p> <p>Optimal stopping: formulation of the problem, examples, American options.</p> <p>Fundamental theorem of asset pricing: formulation, proof, hedging equations, connections to partial differential equations, examples of incomplete markets.</p> <p>Incomplete markets: Lévy models, superhedging, pricing, optimization.</p>

Cilji in kompetence:

Slučajni procesi so osnova za številne modele, ki se uporabljajo v finančnem in aktuarskem svetu. Tečaj se navezuje na teoretična tečaja iz slučajnih procesov in po eni strani odpira pot do uporabe, po drugi pa na drugačen način osvetli teoretične osnove.

Zaradi nepostredne uporabnosti vsebin bodo pri predmetu sodelovali tudi strokovnjaki iz prakse.

Objectives and competences:

Stochastic processes form a basis for numerous models in finance and insurance. The course links theoretical parts learned in other courses on stochastic processes by showing their applications on one side and elucidates

the theoretical background on the other.

Since the content is of great practical importance we expect that also specialists from financial practice will present their work experience during the course.

Predvideni študijski rezultati:

Znanje in razumevanje: Razumevanje modeliranja s slučajnimi procesi v financah in aktuarstvu in razumevanja matematičnih orodij in predpostavk.

Uporaba: Uporaba je neposredna, saj so obravnavani modeli izhodišče za vrednotenje mnogih finančnih in zavarovalnih produktov.

Refleksija: Uporaba slučajnih procesov utrdi znanje iz verjetnosti in slučajnih procesov po eni strani, po drugi pa odpira pot do praktične uporabe teorije slučajnih procesov.

Prenosljive spretnosti – niso vezane le na en predmet: Spretnosti so prenosljive na druga področja matematičnega modeliranja, še

Intended learning outcomes:

Knowledge and understanding: Understanding of stochastic modelling in finance and insurance and understanding of mathematical framework.

Application: Application is immediate as the models under consideration form a basis for

Pricing many financial and insurance products.

Reflection: The application of stochastic processes deepens the knowledge of probability calculus and stochastic processes and paves the way for their application.

Transferable skills: The skills obtained are transferable to other areas of mathematical modelling, but the gist of the course is its

najbolj pa je predmet pomemben zaradi svoje neposredne uporabnosti.

immediate applicability.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije, seminarsek naloge

Learning and teaching methods:

Lectures, exercises, homeworks, consultations, seminars

Načini ocenjevanja:

Delež (v %) /

Weight (in %)

Assessment:

Način (pisni izpit, ustno izpraševanje, naloge, projekt):

samostojna seminarska naloga

ustni izpit

Ocene: 1-5 (negativno), 6-10 (pozitivno) (po Statutu UL)

50%

50%

Type (examination, oral, coursework, project):

seminar work

oral exam

Grading: 1-5 (fail), 6-10 (pass) (according to the Statute of UL)
