

UČNI NAČRT PREDMETA / COURSE SYLLABUS (leto / year 2017/18)						
Predmet:		Teorija grup in polgrup				
Course title:		Theory of semigroups and groups				
Študijski program in stopnja Study programme and level		Študijska smer Study field		Letnik Academic year		Semester Semester
Magistrski študijski program Matematika		ni smeri		1 ali 2		prvi ali drugi
Master's study programme Mathematics		none		1 or 2		first or second
Vrsta predmeta / Course type				izbirni / elective		
Univerzitetna koda predmeta / University course code:				M2212		
Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS
45		30			105	6
Nosilec predmeta / Lecturer:		prof. dr. Jakob Cimprič, prof. dr. Tomaž Košir, prof. dr. Primož Moravec, prof. dr. Primož Potočnik				
Jeziki / Languages:		Predavanja / Lectures: slovenski / Slovene, angleški / English				
		Vaje / Tutorial: slovenski / Slovene, angleški / English				
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:				Prerequisites:		
Vpis v letnik študija.				Enrolment in the programme.		
Vsebina:				Content (Syllabus outline):		

<p>I. Teorija polgrup</p> <p>Osnovni pojmi teorije polgrup, primeri polgrup.</p> <p>Greenove relacije.</p> <p>Regularne polgrupe, polgrupe z obrati.</p> <p>Enostavne polgrupe, povsem enostavne polgrupe.</p> <p>II. Teorija grup</p> <p>Ponovitev osnovnih pojmov teorije grup.</p> <p>Kompozicijska vrsta in Jordan-Hölderjev izrek. Rešljive grupe. Hallov izrek za rešljive grupe. Nilpotentne grupe, p-grupe.</p> <p>Razcepne in nerazcepne razširitve grup, semidirektni produkt grup, Schur-Zassenhausov izrek.</p> <p>Končne enostavne grupe in problem njihove klasifikacije. Klasične grupe (splošne linearne, simplektične, unitarne in ortogonalne) ter pripadajoče enostavne grupe.</p> <p>Osnove teorije upodobitev končnih grup. Teorija karakterjev.</p>	<p>I. Semigroup theory</p> <p>basic notions and examples</p> <p>Green relations</p> <p>Regular semigroups, inverse semigroups.</p> <p>Simple semigroups, completely simple semigroups.</p> <p>II. Group theory</p> <p>Basic notions</p> <p>Composition series, Jordan-Hölder theorem. Solvable groups, Hall's theorem. Nilpotent groups, p-groups.</p> <p>Split and non-split extensions of groups, semidirect product, Schur-Zassenhaus theorem.</p> <p>Finite simple groups and the classification problem. Classical groups (general linear, symplectic, unitary and orthogonal) and the corresponding simple groups.</p> <p>Fundamentals of representation theory of finite groups. Character theory.</p>
---	---

Temeljni literatura in viri / Readings:

J. M. Howie: Fundamentals of semigroup theory, Oxford University Press, Oxford, 1995.
P. M. Higgins: Techniques of semigroup theory, Oxford University Press, Oxford, 1992.
J. J. Rotman: An introduction to the theory of groups, 4. izd., Springer New York 1995.
D. J. S. Robinson: A course in the theory of groups, 2. izd., Springer New York, 1996.

Cilji in kompetence:

Objectives and competences:

Študent spozna osnovne pojme iz teorije polgrup in grup ter njihovo povezanost z drugimi področji matematike.

Students get acquainted with basic notions of group theory and semigroup theory. They get familiar with connections between these two theories and other areas of mathematics.

Predvideni študijski rezultati:

Znanje in razumevanje:

Poznavanje osnovnih pojmov in izrekov teorije polgrup in grup in njihovo prepoznavanje v drugih vejah matematike.

Uporaba:

Teorija polgrup in grup spada med temeljne matematične predmete. Uči nas prepoznavati simetrije v naravi. Uporablja se zlasti v fiziki in kemiji (na primer kristalografija). Znotraj matematike je uporabna v geometriji, asociativni algebri, funkcionalni analizi in teoriji števil.

Refleksija:

Razumevanje teorije na podlagi primerov in uporabe.

Prenosljive spretnosti – niso vezane le na en predmet:

Formulacija problemov v primernem jeziku, reševanje in analiza doseženega na primerih, prepoznavanje grup v geometriji in analizi.

Intended learning outcomes:

Knowledge and understanding:

Basic notions of group theory and semigroup theory, applications in other areas of mathematics.

Application:

Group theory and semigroup theory are classical mathematical disciplines. They teach us how to recognize symmetries. They have immense applications in physics and chemistry (crystallography). Within mathematics, they play an important role in geometry, associative algebra, functional analysis, and number theory.

Reflection:

Understanding theory based on examples and applications.

Transferable skills:

Formulation of problems, solving problems and analysis of results using examples, applying groups in geometry and analysis.

Metode poučevanja in učenja:

Learning and teaching methods:

predavanja, vaje, domače naloge, konzultacije	Lectures, exercises, homeworks, consultations
---	---

		Delež (v %) / Weight (in %)	Assessment:
Načini ocenjevanja:			
Način (pisni izpit, ustno izpraševanje, naloge, projekt):			Type (examination, oral, coursework, project):
izpit iz vaj (2 kolokvija ali pisni izpit)			2 midterm exams instead of written exam, written exam
ustni izpit		50%	oral exam
Ocene: 1-5 (negativno), 6-10 (pozitivno) (po Statutu UL)		50%	Grading: 1-5 (fail), 6-10 (pass) (according to the Statute of UL)
