

UČNI NAČRT PREDMETA / COURSE SYLLABUS						
Predmet:		Diferencialna geometrija				
Course title:		Differential geometry				
Študijski program in stopnja Study programme and level		Študijska smer Study field		Letnik Academic year	Semester Semester	
Magistrski študijski program Matematika		ni smeri		1 ali 2	prvi ali drugi	
Master's study programme Mathematics		none		1 or 2	first or second	
Vrsta predmeta / Course type				izbirni		
Univerzitetna koda predmeta / University course code:				M2315		
Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS
45		30			105	6
Nosilec predmeta / Lecturer:		prof. Janez Mrčun, prof. Pavle Saksida, prof. Sašo Strle				
Jeziki / Languages:	Predavanja / Lectures:	slovenski/Slovene, angleški/English				
	Vaje / Tutorial:	slovenski/Slovene, angleški/English				
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:				Prerequisites:		
Vsebina:				Content (Syllabus outline):		

<p>Obvezni del:</p> <p>Uvod in osnovni pojmi: Vektorska polja in Liejev oklepaj. Temeljni pojmi teorije Liejevih grup in Liejevih algeber. Diferencialne forme. Vektorski svežnji in Riemannove strukture na njih.</p> <p>Glavni svežnji, pridruženi svežnji, sveženj ogrodij, pojem redukcije svežnja.</p> <p>Diferencialne forme z vrednostmi v Liejevih algebrah, povezave na glavnem svežnju. Horizontalni dvig poti. Ukrivljenost in holonomija. Različni opisi ukrivljenosti na glavnem svežnju.</p> <p>Povezave na vektorskih svežnjih, kovariantni odvod. Chernovi razredi.</p> <p>Temelji Riemannove geometrije: Riemannova metrika, Levi-Civitéjeva povezava, Riemannov tenzor ukrivljenosti in njegove lastnosti, Riccijeva in Weylova ukrivljenost, avtoparalelnost, geodetske krivulje. Eksponentna preslikava.</p> <p>Izbirni del:</p> <p>Podgrupe grupe $GL(n, \mathbb{C})$ in simetrični prostori. Gaussova ukrivljenost na ploskvah. Poissonove in simplektične mnogoterosti. Pontrjaginski razredi in Bottov izrek. Konformnost in Weylov tenzor.</p>	<p>Core topics:</p> <p>Introduction: Vector fields and Lie bracket. Fundamental notions of the Lie theory. Differential forms. Vector bundles, Riemann structures on vector bundles.</p> <p>Principal bundles, associated bundles, frame bundles, reductions of bundles.</p> <p>Differential forms with values in Lie algebras, connections on principal bundles. Horizontal lift of a path. Curvature and holonomy. Various descriptions of the curvature on a principal bundle.</p> <p>Connections on vector bundles, covariant derivative. Chern classes.</p> <p>Fundamental notions of Riemann geometry: Riemannian metric, Levi-Civité connection, Riemann curvature tensor and its properties, Ricci and Weyl curvatures, autoparallel curves, geodesic curves. Exponential map.</p> <p>Additional topics: Subgroups of the group $GL(n, \mathbb{C})$ and symmetric spaces. Gaussian curvature on surfaces. Poisson and symplectic manifolds. Pontryagin classes and Bott's theorem. Conformality and Weyl tensor</p>

Cilji in kompetence:

Študent se spozna s temelji sodobne diferencialne geometrije. Osnovna pojma tega predmeta sta povezava na glavnem ali na vektorskem svežnju in ukrivljenost povezave. Ukrivljenost je predstavljena skozi optiko Frobeniusovega izreka. Vpeljan je pojem holonomije, opisana je zveza med ukrivljenostjo in holonomijo. Te pojme uporabimo pri obravnavi temeljev Riemannove geometrije. Prek Chernovih razredov poudarimo povezavo s topologijo.

Objectives and competences:

Fundamental concepts of modern differential geometry are introduced. The central objects of the course are connections on principal or vector bundles and their curvatures. The curvature is described from the point of view of the Frobenius theorem. The notion of holonomy is introduced and the relationship between holonomy and curvature is described. These notions are then used in the presentation of the fundamentals of the Riemannian geometry. The relationship between differential geometry and topology is illustrated by means of Chern classes.

Predvideni študijski rezultati:

Znanje in razumevanje: Poznavanje in razumevanje osnovnih pojmov in definicij iz diferencialne geometrije.
Uporaba: Uporaba teorije pri reševanju problemov.

Refleksija: Razumevanje teorije na podlagi uporabe.

Prenosljive spretnosti – niso vezane le na en predmet: Spretnosti uporabe domače in tuje literature in drugih virov, identifikacija in reševanje problemov, kritična analiza.

Intended learning outcomes:

Knowledge and understanding: Understanding the fundamental definitions and concepts of differential geometry.
Application: Solving problems by applying the relevant theory.

Reflection: Understanding the theory through its applications.

Transferable skills: Skills in the use of the relevant literature and other sources, formulating problems and solving them, critical analysis.

Metode poučevanja in učenja:

Learning and teaching methods:

predavanja, vaje, domače naloge, konzultacije	Lectures, exercises, homework, consultations
