### Objectives and competences:

Students learn the basics of coding theory and cryptography.

### Predvideni študijski rezultati:

Znanje in razumevanje: Matematični postopki, s katerimi zagotavljamo zanesljivo in varno komunikacijo.

Uporaba: Kodiranje in kriptografija se uporabljata pri digitalnih komunikacijah in za zagotavljanje informacijske varnosti.

Refleksija: Osnovne tehnike sodobne kriptografije temeljijo na matematičnih pojmi in postopkih, ki zagotavljajo največjo znano mero varnosti.

### Intended learning outcomes:

Knowledge and understanding:  
Mathematical procedures that enable reliable and secure communication.

Application:

Coding theory and cryptography are used in digital communications and for providing information security.

Prenosljive spretnosti – niso vezane le na en predmet: Študent pridobi sposobnost kritičnega razmišljanja in analize komunikacijskih kanalov in računalniških sistemov s stališča informacijske varnosti.

Reflection:  
 Basic techniques of modern cryptography are based on mathematical concepts and procedures that provide the maximum level of security known.

Transferable skills:  
 The students will acquire skills of critical thinking and analysis of the communication channels and computer systems with respect to information security.
