#### **Cilji in kompetence:**

<p>Študent nadgradi poznavanje osnovnih podatkovnih struktur in z njimi povezanih algoritmov, ki se uporabljajo pri programiranju. Seznan se z matematično analizo pravilnosti ter časovne in prostorske zahtevnosti algoritmov.</p>
--

#### **Objectives and competences:**

<p>The student upgrades the knowledge about basic data structures and related algorithms that are used at programming. It gets familiar with mathematical analysis of correctness, time and space complexity of algorithms.</p>
---

#### **Predvideni študijski rezultati:**

#### **Intended learning outcomes:**

Znanje in razumevanje: Poznavanje osnovnih podatkovnih struktur in algoritmov ter praktičnih problemov, pri katerih se jih lahko smiselno uporabi. Poznavanje osnov teorije računske zahtevnosti in razumevanje njenega pomena v praksi.

Uporaba: Snovanje učinkovitih računalniških programov in napovedovanje njihovega obnašanja s pomočjo matematičnih metod.

Refleksija: Povezanost med teoretičnimi napovedmi o obnašanju računalniških programov in dejanskim obnašanjem.

Prenosljive spretnosti – niso vezane le na en predmet: Pomen matematične analize računskih postopkov in njena praktična uporabnost. Ločevanje med računsko obvladljivimi in neobvladljivimi problemi.

Knowledge and understanding: Knowledge about basic data structures and algorithms, as well as practical problems with relevant applications. Knowledge about basics of theory of computational complexity and understanding its meaning in practice.

Application: Designing efficient computer programs and predicting their behavior by using mathematical methods.

Reflection: Connection between theoretical predictions about behavior of computer programs and actual behavior.

Transferable skills: Meaning of mathematical analysis of computational procedures and its practical applicability. Distinction between manageable and unmanageable problems.

#### Metode poučevanja in učenja:

Predavanja, vaje, domače naloge, konzultacije

#### Learning and teaching methods:

Lectures, exercises, homework, consultations

#### Načini ocenjevanja:

Delež (v %) /

Weight (in %)

#### Assessment:

Način (pisni izpit, ustno izpraševanje, naloge, projekt):

50%

Type (examination, oral, coursework, project):

Domače naloge z zagovorom kolokvija namesto izpita iz vaj, izpit iz vaj,

50%

homeworks with defense

izpit iz teorije

2 midterm exams instead of written exam, written exam

ocene: 1-5 (negativno), 6-10 (pozitivno) (po Statutu UL)

Exam of theory

		grading: 1-5 (fail), 6-10 (pass) (according to the Statute of UL)
