

UČNI NAČRT PREDMETA / COURSE SYLLABUS (leto / year 2017/18)											
Predmet:	Verjetnost in statistika										
Course title:	Probability and statistics										
Študijski program in stopnja Study programme and level	Študijska smer Study field		Letnik Academic year	Semester Semester							
Univerzitetni študijski program Finančna matematika	ni smeri		2	drugi							
First cycle academic study programme Financial Mathematics	none		2	second							
Vrsta predmeta / Course type	obvezni / compulsory										
Univerzitetna koda predmeta / University course code:	M0361										
Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS					
45		45			90	6					
Nosilec predmeta / Lecturer:	prof. dr. Mihael Perman, prof. dr. Jaka Smrekar										
Jeziki / Languages:	Predavanja / Lectures:	slovenski / Slovene									
	Vaje / Tutorial:	slovenski / Slovene									
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:										
Vpis v letnik študija. Opravljena predmeta Analiza 2 in Verjetnost 1.	Enrolment in the programme. Completed courses Analysis 2 and Probability 1.										
Vsebina:	Content (Syllabus outline):										

Zvezne slučajne spremenljivke.	Continuous random variables.
Večrazsežne zvezne porazdelitve.	Joint continuous distributions.
Funkcije zveznih slučajnih vektorjev, transformacijska formula.	Functions of continuous random vectors, transformation formula.
Konvergenca porazdelitev, centralni limitni izrek, zakoni velikih števil.	Convergence of distributions, the central limit theorem, law of large numbers.
Opisne statistike in grafični prikazi podatkov.	Descriptive statistics and graphical presentation of the data.
Pojem statističnega modela, parametri.	Statistical models, parameters.
Vzorčenje, vzorčni načrti, cenilke, vzorčna porazdelitev, standardna napaka, normalna aproksimacija, intervali zaupanja, stratificirano vzorčenje, kvocientna ocena.	Sampling, sampling designs, estimators, sampling distribution, standard errors, normal approximation, confidence intervals, stratified sampling, ratio estimators.
Ocenjevanje parametrov, cenilke, nepristranskost, metoda največjega verjetja, asimptotske lastnosti cenilk.	Parameter estimation, estimators, unbiased estimators, maximum likelihood, asymptotic properties of estimators.
Preizkušanje domnev, definicija problema, primeri, testne statistike, porazdelitve testnih statistik, velikost in moč testa, metoda razmerja verjetij.	Hypothesis testing, statement of the problem, examples, test statistics, distribution of test statistics, size and power of the test, likelihood ratio test.
Regresija, definicija regresijskega modela, primeri, metoda najmanjših kvadratov, izrek Gauss-Markova, standardne napake in testi za regresijo, diagnostične metode.	Regression, regression model, least squares method, Gauss-Markov theorem, standard errors and hypothesis tests in regression, diagnostic methods.

Temeljni literatura in viri / Readings:

- D. Stirzaker, Probability and Random Variables, A beginner's guide, Cambridge University Press, 1999.
- G. Grimmett and D. Stirzaker, Probability and Random Processes, Third Edition, Oxford University Press, 1982.

J Rice, Mathematical Statistics & Data Analysis, Third Edition, Duxbury, 2007.

Cilji in kompetence:

Analiza in interpretacija podatkov je bistven del zadolžitev finančnih matematikov. Tečaj je namenjen predstavitevi osnovnih statističnih konceptov in modelov, ki največkrta nastopijo v statistični praksi.

Objectives and competences:

Analysing and interpreting data is an essential part of the work of a financial mathematician. The course presents statistical concepts and statistical models most commonly used in statistical practice

Predvideni študijski rezultati:

Poznavanje statističnega razmišljanja statističnih konceptov v obsegu, ki zadošča za samostojen nadaljnji študij in samostojo uporabo statistike.

Intended learning outcomes:

Introduction of statistical concepts sufficient for independent study and the ability to present and analyze data with more advanced statistical models.

Metode poučevanja in učenja:

Predavanja, vaje, seminarska naloga.

Learning and teaching methods:

Lectures, problem sessions, seminar assignment.

Načini ocenjevanja:

Delež (v %) /

Weight (in %)

Assessment:

2 kolokvija ali pisni izpit, ustni izpit.

75 %

2 midterms or written exam, oral exam.

Seminarska naloga.

25%

Seminar assignment.

Ocene: 1-5 (negativno), 6-10 (pozitivno)
(po Statutu UL)

Grading: 1-5 (fail), 6-10 (pass) (according
to the Statute of UL)
