Cilji in kompetence:

Študent pri predmetu spozna nekaj novih pojmov in tehnik matematične analize, kot so dvojni in trojni integrali, reševanje diferencialnih enačb, kompleksna analiza. Te vsebine sodijo v uporabno matematiko in so nujno potrebne za razumevanje mnogih drugih predmetov, ki jih študent sreča pri študiju. Na predavanjih in vajah se študent uči matematičnega razmišljanja in strogosti, ter pridobiva praktično, delovno znanje obravnnavanih področij.

Objectives and competences:

By attending the course students get acquainted with some new notions and techniques of mathematical analysis, such as the double and the triple integrals, differential equations and complex analysis. These topics belong to the applied mathematics and are an essential component in the education of the students majoring in natural sciences or engineering. During the lectures and the classes students learn the mathematical rigor. They also acquire practical working knowledge of the topics, covered in the course.

Predvideni študijski rezultati:

Intended learning outcomes:

Znanje in razumevanje:	Knowledge and understanding:
Razumevanje in uporaba nekaterih zahtevnejših konceptov matematične analize.	Understanding of certain advanced topics of mathematical analysis.

Metode poučevanja in učenja:	Learning and teaching methods:
Predavanja, vaje, domače naloge, konzultacije.	Lectures, classes, homework, consultations.

Načini ocenjevanja:	Delež (v %) / Weight (in %)	Assessment:
		Type (examination, oral, coursework, project):
Način (pisni izpit, ustno izpraševanje, naloge, projekt)
