|---|--|
| <p>Številski sistemi. Aksiomi obsega. Urejenost. Natančna zgornja meja. Dedekindov aksiom. Evklidski prostori. Preslikave in funkcije. Moč množice. Kardinalna števila.</p> <p>Številska zaporedja. Stekališče in limita. Cauchyjev kriterij. Algebraične operacije s konvergentnimi zaporedji. Monotona zaporedja. Elementarna teorija številskih vrst. Konvergenca. Vrste s pozitivnimi členi. Cauchyjev kriterij. Algebraične operacije. Konvergenčni kriteriji. Potenčne vrste. Absolutna in pogojna konvergenca. Leibnizev kriterij. Cauchyjev produkt vrst.</p> <p>Funkcije ene spremenljivke. Zveznost. Limitne vrednosti. Lastnosti zveznih funkcij. Pregled zveznosti elementarnih funkcij.</p> <p>Odvod funkcije. Geometrijski in fizikalni pomen. Diferencial in tangenta aproksimacija. Pravila za odvajanje. Rollov in Lagrangeev izrek. Uporaba pri analizi funkcij. Višji odvodi. L'Hôpitalovi izreki.</p> <p>Nedoločeni in določeni integral funkcije ene spremenljivke. Izreki o obstoju integrala. Lastnosti integrala. Povezava med določenim in nedoločenim integralom. Izreki o povprečni vrednosti. Posplošeni integrali. Uporaba. Integracijske metode.</p> <p>Konvergenca funkcijskih zaporedij in vrst. Člensko odvajanje in integriranje. Taylorjeva formula z ostankom in uporaba. Vrste nekaterih elementarnih funkcij.</p> <p>Topologija metričnih prostorov. Stekališča množic in zaporedij. Limita zaporedja. Odprte in zaprte množice. Cauchyjeva zaporedja in polnost. Kompaktnost. Heine-Borelov izrek. Zvezne preslikave. Banachov izrek o obstoju negibne točke skrčitve.</p> | <p>Number systems. Field axioms. Order. Supremum. Dedekind's axiom. Euclidean spaces. Maps and functions. Cardinality. Cardinal numbers.</p> <p>Numerical sequences. Cluster and limit points. Cauchy criterion. Algebraic operations on convergent sequences. Monotonic sequences. Elementary theory on numerical series. Convergence. Cauchy convergence test. Algebraic operations. Convergence tests. Power series. Absolute and conditional convergence. Leibniz criterion. Cauchy product of series.</p> <p>Functions of one variable. Continuity. Limit values. Properties of continuous functions. Overview of continuity of elementary functions.</p> <p>Derivative of a function. Geometric and physical meaning. Differentiation rules. Rolle's theorem, Lagrange's mean value theorem. Applications in analysing functions. Higher derivatives. L'Hôpital's rule.</p> <p>Indefinite and definite integral of function of one variable. Theorems on the existence of an integral. Properties of integral. Relation between definite and indefinite integral. Mean value theorem. Improper integrals. Applications. Integration methods.</p> <p>Convergence of functional sequences and series. Term-by-term differentiation and integration. Taylor series, remainder and applications. Series of particular elementary functions.</p> <p>Topology of metric spaces. Cluster points of sets and sequences. Limit of a sequence. Open and closed sets. Cauchy sequences and complete metric spaces. Compactness. Heine-Borel theorem. Continuous maps. Banach fixed-point theorem.</p> |

Temeljni literatura in viri / Readings:

I. Vidav: Višja Matematika I, DMFA-založništvo, Ljubljana, 1994.

N. Prijatelj: Uvod v matematično analizo I, DMFA-založništvo, Ljubljana, 1980.

S. Lang: Undergraduate Analysis, 2nd edition, Springer, New York, 1997.

W. Rudin: Principles of Mathematical Analysis, 3rd edition, McGraw-Hill, New York-Auckland-Düsseldorf, 1976.

R. S. Strichartz: The Way of Analysis, Jones & Bartlett, Boston, 2000.

K. A. Ross: Elementary Analysis : The Theory of Calculus, Springer, New York-Heidelberg, 2003.

Cilji in kompetence:

Študent spozna osnovne pojme matematične analize, kot so limita, zveznost, odvod in integral funkcije ene realne spremenljivke, številske in funkcijske vrste, metrični prostori. Analiza 1 sodi med temeljne predmete pri študiju matematike.

Objectives and competences:

Students learn the basic concepts of mathematical analysis such as limit, continuity, derivative and integral of real functions of one variable, numerical and function series, and metric spaces. Analysis 1 is one of the fundamental courses in mathematics.

Predvideni študijski rezultati:

Znanje in razumevanje: Razumevanje diferencialnega in integralnega računa funkcij ene realne spremenljivke ter sorodnih tem. Uporaba razvitih metod v geometriji in naravoslovju. Uporaba: Analiza 1 sodi med temeljne predmete pri študiju matematike, uporaba tega v naravoslovje in na druga področja znanosti. Refleksija: Razumevanje teorije na podlagi primerov in uporabe. Prenosljive spretnosti – niso vezane le na en predmet: Postavitev problema, izbira metode, reševanje problema, analiza rezultata na primerih. Formulacija problemov v matematičnem jeziku. Spretnost uporabe literature.

Intended learning outcomes:

Knowledge and understanding: Understanding of differential and integral calculus of real functions of one variable and related topics. The application of method in geometry and natural science.

Application: Analysis 1 is one of the fundamental courses in mathematics, it can be used in natural science and other field of science

Reflection: Understanding of the theory from the applications.

Transferable skills: The ability to design the problem, select an appropriate method, solve the problem, and analyse the results on test cases. The ability to formulate a problem in mathematical language. Skills in using the literature.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije

Learning and teaching methods:

Lectures, exercises, homework, consultations

Načini ocenjevanja:

Delež (v %) /

Weight (in %)

Assessment:

Način (pisni izpit, ustno izpraševanje, naloge, projekt):

4 kolokviji namesto izpita iz vaj, izpit iz vaj,

izpit iz teorije

ocene: 1-5 (negativno), 6-10 (pozitivno) (po Statutu UL)

50%

50%

Type (examination, oral, coursework, project):

4 midterm exams instead of written exam, written exam

oral exam

grading: 1-5 (fail), 6-10 (pass) (according to the Statute of UL)
