

UČNI NAČRT PREDMETA / COURSE SYLLABUS (leto / year 2016/17)											
Predmet:	Mehanika 2										
Course title:	Mechanics 2										
Študijski program in stopnja Study programme and level	Študijska smer Study field		Letnik Academic year	Semester Semester							
Univerzitetni študijski program Matematika	ni smeri		3	drugi							
First cycle academic study programme Mathematics	none		3	second							
Vrsta predmeta / Course type	izbirni / elective										
Univerzitetna koda predmeta / University course code:	M0232										
Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS					
30		30			90	5					
Nosilec predmeta / Lecturer:	prof. dr. Igor Dobovšek, doc. dr. George Mejak										
Jeziki / Languages:	Predavanja / Lectures:	slovenski / Slovene									
	Vaje / Tutorial:	slovenski / Slovene									
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:										
Vpis v letnik študija. Opravljena predmeta Analiza 2a in Analiza 2b.	Enrolment in the programme. Completed courses Analysis 2a and Analysis 2b.										
Vsebina:	Content (Syllabus outline):										

<p>Dinamični sistemi. Osnovne definicije. Fazni prostor. Orbite. Linearizacija in kritične točke avtonomnih sistemov. Gradientni sistemi.</p> <p>Stabilnost. Osnovne definicije. Stabilnost lineariziranih sistemov. Sistemi s periodičnimi koeficienti.</p> <p>Teorija bifurkacij. Osnovni pojmi teorije bifurkacij. Razdelitev bifurkacij ravninskih vektorskih polj. Enostavne bifurkacije. Hopfova bifurkacija.</p> <p>Metode povprečenja. Geometrijski opis metode povprečenja. Metoda energijskega ravnotežja. Metoda počasi spreminjajoče se amplitude. Periodične rešitve in metoda harmoničnega ravnovesja.</p> <p>Perturbacijske metode. Direktne metode. Lindstedtova metoda. Metoda singularnih perturbacij. Koordinatne transformacije in renormalizacija. Metoda več časovnih skal.</p> <p>Uporabe v nelinearni mehaniki. Bifurkacije v mehaniki trdnih teles. Eulerjev uklon. Primeri generičnih tipov hidrodinamične nestabilnosti.</p>	<p>Dynamical systems. Basic definitions. Phase space. Orbits. Linearization and critical points of autonomous systems. Stability. Basic definitions. Stability of linear systems. Systems with periodic coefficients.</p> <p>Bifurcation theory. Basic definitions. Classification of bifurcations of 2D vector fields. Simple bifurcations. Hopf bifurcation.</p> <p>Averaging methods. Geometrical description. Method of energy equilibrium. Method of slow amplitude variation. Periodic solutions and method of harmonic equilibrium.</p> <p>Perturbation methods. Direct methods. Lindstedt's method. Method of singular perturbations. Coordinate transformations and renormalization. Multiple time scales. Examples in nonlinear mechanics. Bifurcations in solid mechanics. Euler buckling. Hydrodynamical stability.</p>

Temeljni literatura in viri / Readings:

- F. Verhulst: Nonlinear Differential Equations and Dynamical Systems, Universitext, Springer.
- R. H. Rand, D. Armbruster: Perturbation Methods, Bifurcation Theory and Computer Algebra, Applied Mathematical Sciences 65, Springer.
- R. Seydel: Practical Bifurcation and Stability Analysis, Interdisciplinary Applied Mathematics, Springer.
- C. L. Dym: Stability Theory and its Applications to Structural Mechanics, Dover.

Cilji in kompetence:

Objectives and competences:

Predstavitev osnovnih pojmov in vsebin kvalitativne analize nelinearnih sistemov s poudarkom na uporabi v mehaniki.

Introduction to qualitative analysis of nonlinear systems with applications in mechanics.

Predvideni študijski rezultati:

Znanje in razumevanje: Poznavanje in razumevanje osnovnih pojmov in principov kvalitativne analize nelinearnih sistemov.

Uporaba: Uporaba pridobljenega matematičnega znanja omogoča reševanje konkretnih primerov iz prakse.

Refleksija: Na podlagi uporabe konkretnih primerov iz mehanike se omogoči razumevanje abstraktne matematične teorije.

Prenosljive spremnosti – niso vezane le na en predmet: Zmožnost identifikacije, formulacije in reševanja nelinearnih problemov na področju uporabne matematike in tehnike.

Intended learning outcomes:

Knowledge and understanding: Familiarity and understanding of basic principles of qualitative analysis of nonlinear systems.

Application: Application of the acquired knowledge enable solution of real world problems.

Reflection: Abstract mathematical theory is reflected in solving concrete problems of mechanics.

Transferable skills: Ability to identify, formulate and solve nonlinear problems of mechanics and technology.

Metode poučevanja in učenja:

Predavanja, vaje, konzultacije

Learning and teaching methods:

Lectures, exercises, consultations

Delež (v %) /

Načini ocenjevanja:

Weight (in %)

Assessment:

Način (pisni izpit, ustno izpraševanje, naloge, projekt):

50%

Type (examination, oral, coursework, project):

2 kolokvija namesto izpita iz vaj, izpit iz vaj,

50%

2 midterm exams instead of written

izpit iz teorije ocene: 1-5 (negativno), 6-10 (pozitivno) (po Statutu UL)		exam, written exam oral exam grading: 1-5 (fail), 6-10 (pass) (according to the Statute of UL)
