

UČNI NAČRT PREDMETA / COURSE SYLLABUS (leto / year 2017/18)									
Predmet:	Statistika								
Course title:	Statistics								
Študijski program in stopnja Study programme and level	Študijska smer Study field		Letnik Academic year	Semester Semester					
Visokošolski strokovni študijski program Praktična matematika	ni smeri		2	drugi					
First cycle professional study programme Practical Mathematics	none		2	second					
Vrsta predmeta / Course type	obvezni / compulsory								
Univerzitetna koda predmeta / University course code:	M0425								
Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS			
30		30			90	5			
Nosilec predmeta / Lecturer:	prof. dr. Roman Drnovšek, prof. dr. Mihael Perman								
Jeziki / Languages:	Predavanja / Lectures: slovenski / Slovene								
	Vaje / Tutorial: slovenski / Slovene								
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:								
Vpis v letnik študija.	Enrolment in the programme.								
Vsebina:	Content (Syllabus outline):								

<p>Opisne statistike: povprečja, standardni odkloni, kovariance.</p> <p>Grafične predstavitev podatkov: histogrami, razsevni grafikoni, QQ-diagrami.</p> <p>Vzorčenje: uvodni primeri, vzorčni načrt, vzorčna porazdelitev, standardna napaka, interval zaupanja.</p> <p>Regresijski modeli: predpostavke regresijskega modela, ocenjevanje parametrov, napovedovanje, regresijski modeli kot raziskovalno orodje.</p> <p>Preizkušanje domnev: osnovne ideje, testne statistike in njihove porazdelitve, p-vrednosti, primeri uporabe.</p>	<p>Descriptive statistics: mean, standard deviation, covariance.</p> <p>Graphical representation of data: histograms, charts, QQ-diagrams.</p> <p>Sampling: introductory examples, sampling design, sampling distribution, standard error, confidence interval.</p> <p>Regression models: linear regression model, parameter estimation, prediction, regression models as a research tool.</p> <p>Testing the hypothesis: the basic idea of the test statistics and their distributions, p-values, examples.</p>
--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Temeljni literatura in viri / Readings:

- D. Freedman, R. Pisani, R. Purves: Statistics, 3rd Edition, Norton, 2003.
- M. Hladnik: Verjetnost in statistika, zapiski s predavanj, Fakulteta za računalništvo in informatiko, 2002.
- J. Rice: Mathematical Statistics and Data Analysis, 2nd Edition, Duxbury press, 1996.
- R. Scheaffer, M. Gnanadesikan, A. Watkins, J. A. Witmer: Activity Based Statistics, Springer, 1996.

Cilji in kompetence:

Študenti bodo utrdili znanje iz verjetnostnega računa. Sposobni bodo nastaviti matematične modele in jih uporabljati v dejanskih situacijah.

Objectives and competences:

Students will consolidate knowledge of probability theory. They will be able to set up mathematical models and apply them to the actual situations.

Predvideni študijski rezultati:

Znanje in razumevanje:
Koncepti statistike so po eni strani utrjevanje konceptov iz verjetnosti, po drugi strani pa gre za eno najbolj uporabnih vej matematike, saj

Intended learning outcomes:

Knowledge and understanding: Statistics is one of the most useful branches of mathematics, because it is an effective data analysis.
Application: Statistics is a useful tool in almost

gre za učinkovito in dobro podkrepjeno analizo podatkov.

Uporaba:

Statistika je del orodjarne na skoraj vsakem področju, kjer nastopajo podatki in je potrebno priti do zaključkov na podlagi teh podatkov. To velja tako za naravoslovne vede kot tudi za vede kot so ekonomija, zavarovalništvo in finance.

Refleksija:

Predmet utrjuje znanje iz verjetnosti in utrjuje povezavo med matematiko in njenimi uporabami.

Prenosljive spretnosti – niso vezane le na en predmet: Sposobnost matematičnega modeliranja in analiza podatkov z uporabo abstraktnih modelov.

every area where conclusions are based on some data. This applies to both the natural sciences and the other sciences such as economics, insurance, and finance.

Reflection:

The subject consolidates knowledge of probability and strengthens the connections between mathematics and its applications.

Transferable skills:

The ability of mathematical modeling and data analysis using abstract models.

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije

Learning and teaching methods:

Lectures, exercises, homeworks, consultations

Delež (v %) /

Weight (in %)

Assessment:

Načini ocenjevanja:	Delež (v %) / Weight (in %)	Assessment:
Način (pisni izpit, ustno izpraševanje, naloge, projekt): izpit iz vaj (2 kolokvija ali pisni izpit) ustni izpit Ocene: 1-5 (negativno), 6-10 (pozitivno) (po Statutu UL)	50% 50%	Type (examination, oral, coursework, project): 2 midterm exams instead of written exam, written exam oral exam Grading: 1-5 (fail), 6-10 (pass) (according to the Statute of UL)
