Cilji in kompetence:

Objectives and competences:

Študent spozna glavne tehnike kombinatornega preštevanja.

The student learns the main techniques of enumerative combinatorics.

Predvideni študijski rezultati:

Znanje in razumevanje: Študentje poznajo in razumejo vlogo rodovnih funkcij in algebrskih struktur pri študiranju kombinatornih problemov.

Uporaba: Študentje znajo uporabljati teorijo rodovnih funkcij in algebrskih struktur za reševanje kombinatornih problemov. Refleksija: Študentje spoznajo povezavo med strukturo kombinatornega problema in algebraično naravo pripadajočih rodovnih funkcij oziroma drugih struktur. Prenosljive spretnosti – niso vezane le na en predmet: Uporaba rodovnih funkcij v verjetnosti, poglobljeno razumevanje klasične Möbiusove funkcije, delovanje grup na množici.

Intended learning outcomes:

Knowledge and understanding: Students understand the role of generating functions and algebraic structures in the study of combinatorial problems. Application: Students know how to use generating functions and algebraic structures to solve combinatorial problems. Reflection: The students learn the connection between the structure of the combinatorial problem and the algebraic nature of the corresponding generating functions and other structures. Transferable skills: Applications of generating functions in probability, a deeper understanding of the classical Möbius function, action of a group on a set.
