

UČNI NAČRT PREDMETA / COURSE SYLLABUS (leto / year 2016/17)											
Predmet:	Teorija grafov										
Course title:	Graph theory										
Študijski program in stopnja Study programme and level	Študijska smer Study field		Letnik Academic year	Semester Semester							
Magistrski študijski program Finančna matematika	ni smeri		1 ali 2	prvi ali drugi							
Master's study programme Financial Mathematics	none		1 or 2	first or second							
Vrsta predmeta / Course type	izbirni / elective										
Univerzitetna koda predmeta / University course code:	M2213										
Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS					
45		30			105	6					
Nosilec predmeta / Lecturer:	prof. dr. Sandi Klavžar, prof. dr. Primož Potočnik, prof. dr. Riste Škrekovski, doc. dr. Arjana Žitnik										
Jeziki / Languages:	Predavanja / Lectures:	slovenski / Slovene, angleški / English									
	Vaje / Tutorial:	slovenski / Slovene, angleški / English									
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:										
Vpis v letnik študija.	Enrolment in the programme.										
Vsebina:	Content (Syllabus outline):										

Prirejanja in faktorji (min-max izreki, neodvisne množice in pokritja, Tutov izrek o 1-faktorju)	Matchings and factors (min-max theorem, independent sets and coverings, Tutte's 1-factor theorem)
Povezanost (struktura 2-povezanih in k-povezanih grafov, dokaz in uporabe Mengerjevih izrekov)	Graph connectivity (structure of 2-connected and k-connected graphs, Menger theorem and its applications)
Barvanja grafov (meje, dokaz Brooksovega izreka, struktura k-kromatičnih grafov, Turanov izrek, kromatični polinom, tetivni grafi)	Graph colorings (bounds of the chromatic number, structure of k-chromatic graphs, Turan's theorem, chromatical polynomial, chordal graphs)
Ravninski grafi (dualni graf, izrek Kuratowskega, konveksne vložitve, barvanja ravninskih grafov, prekrižno število)	Planar graphs (dual graph, Kuratowski's theorem, convex embedding, colorings of planar graphs, crossing number)
Predavatelj izbere še eno izmed naslednjih tem: barvanja povezav in graf povezav, hamiltonski grafi, popolni grafi, ekstremalni problemi, dominacija v grafih, simetrijske lastnosti grafov II.	Instructor chooses an addition topic from the following list: edge colorings and line graphs, Hamiltonian graphs, perfect graphs, extremal graph problems, graph domination, symmetry properties of graphs II.

Temeljni literatura in viri / Readings:

- R. Diestel: Graph Theory, 3. izdaja, Springer, Berlin, 2005.
A. Bondy, U.S.R. Murty: Graph Theory, 2. izdaja, Springer, Berlin, 2008.
D. West: Introduction to Graph Theory, 2. izdaja, Prentice Hall, Upper Saddle River, 2005.
R. J. Wilson, M. Watkins: Uvod v teorijo grafov, DMFA Slovenije, Ljubljana, 1997.

Cilji in kompetence:

Študent poglobi in razširi znanje teorije grafov. Spozna uporabnost grafov in omrežij na različnih področjih matematike ter možnosti za njihovo uporabo tudi v drugih vejah znanosti.

Objectives and competences:

Students will deepen and broaden their knowledge of graph theory, and learn about the usefulness of graphs and networks in different areas of mathematics and their potential use in other branches of science.

Predvideni študijski rezultati:

Intended learning outcomes:

<p>Znanje in razumevanje: Slušatelj poglobi znanje iz teorije grafov.</p> <p>Uporaba: Grafi omogočajo matematično modeliranje različnih pojavov. Slušatelj se seznani z vrsto matematičnih rezultatov, ki opisujejo lastnosti grafov in tako omogočajo matematično analizo modelov, opisanih z grafi.</p> <p>Refleksija: Povezovanje teoretičnih spoznanj s praktičnimi uporabami na primer v optimizaciji in pri programiranju. Sposobnost prepoznavanja problemov, ki jih lahko uspešno opišemo z grafi.</p> <p>Prenosljive spremnosti – niso vezane le na en predmet: Sposobnost opisa problemov iz vsakdanjega življenja s pomočjo matematičnih struktur, še posebej z grafi. Sposobnost uporabe matematičnih orodij za reševanje problemov.</p>	<p>Knowledge and understanding: Students deepen their knowledge of graph theory.</p> <p>Application: Graphs allow mathematical modeling of variety of phenomena. Students learn various mathematical results that describe properties of graphs and thus provide a mathematical analysis of the models described by graphs.</p> <p>Reflection: Integration of theoretical knowledge with practical applications such as optimization and programming. Ability to recognize problems that can be successfully described by graphs.</p> <p>Transferable skills: The ability to describe practical problems with the help of mathematical structures, in particular with graphs. The ability to use mathematical tools to solve problems.</p>

Metode poučevanja in učenja:

predavanja, vaje, domače naloge, konzultacije

Learning and teaching methods:

lectures, exercises, homeworks, consultations

Načini ocenjevanja:

Delež (v %) /

Weight (in %)

Assessment:

<p>Način (pisni izpit, ustno izpraševanje, naloge, projekt):</p> <p>izpit iz vaj (pisni izpit)</p> <p>ustni izpit</p> <p>Ocene: 1-5 (negativno), 6-10 (pozitivno) (po Statutu UL)</p>	<p>50%</p> <p>50%</p> <p></p> <p></p>	<p>Type (examination, oral, coursework, project):</p> <p>written exam</p> <p>oral exam</p> <p>Grading: 1-5 (fail), 6-10 (pass) (according to the Statute of UL)</p>
