

UČNI NAČRT PREDMETA / COURSE SYLLABUS (leto / year 2016/17)											
Predmet:	Kriptografija in računalniška varnost										
Course title:	Cryptography and computer security										
Študijski program in stopnja Study programme and level	Študijska smer Study field		Letnik Academic year	Semester Semester							
Interdisciplinarni magistrski študijski program Računalništvo in matematika	ni smeri		1 ali 2	prvi ali drugi							
Interdisciplinary Master's study programme Computer Science and Mathematics	none		1 or 2	first or second							
Vrsta predmeta / Course type	izbirni / elective										
Univerzitetna koda predmeta / University course code:	M2837										
Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS					
45	10	20			105	6					
Nosilec predmeta / Lecturer:	prof. dr. Aleksandar Jurišić										
Jeziki / Languages:	Predavanja / Lectures:	slovenski / Slovene, angleški / English									
	Vaje / Tutorial:	slovenski / Slovene, angleški / English									
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:										
Vpis v letnik študija.	Enrolment in the programme.										
Vsebina:	Content (Syllabus outline):										

<p>Informacijska/računalniška varnost opisuje vse preventivne postopke in sredstva s katerimi zagotovimo dostop do informacijskih sistemov in njihove vsebine ter preprečimo njihovo nepooblaščeno uporabo. Med preventivnimi ukrepi nudi kriptografija največjo varnost oziroma zaščito glede na svojo prilagodljivost digitalnim medijem in s tem predstavlja osnovo informacijske družbe (cilji: zasebnost, celovitost podatkov, digitalno overjanje/ podpisovanje, digitalni denar, in drugi kriptografski protokoli, obseg: matematika, računalništvo, elektrotehnika, finance, politika, obramba, itd.). Vsebina bo med drugim zajemala naslednje teme:</p> <ul style="list-style-type: none"> • Simetrična kriptografija— Klasični tajnopisi in zgodovina kriptografije— Kerckhoffov princip in stopnje napadov na kriptosisteme.— Shannonova teorija informacij in entropija (popolna, računska in dokazljiva varnost)— Bločne šifre (DES/IDEA, AES in finalisti, linearna in diferenčna analiza)— Tokovne šifre/PRNG (RC4, LFSR in Berlekamp-Masseyjev algoritem, ...),— Kriptoanaliza in statistične metode— Zgoševalne funkcije (MD/SHA, HMAC ...) in kode za avtentikacijo (MAC), napadi s paradoksom rojstnih dni, novi napadi, ... • Kriptografija javnih ključev oziroma asimetrična kriptografija— Popolna varnost (računska, brezpogojna, dokazljiva)— Kriptosistemi z javnimi ključi, enosmerne funkcije in z njimi povezani problemi iz teorije števil (testiranje praštevilskosti, faktorizacija števil, diskretni logaritem)— Digitalni podpisi (RSA, DSA, enkratni, slepi, skupinski, itd.)— Protokoli za dogovor o ključu (Diffie-Hellman, ElGamal, Kerberos, STS)— Sheme za identifikacijo oseb in naprav (izziv/odgovor ...)— Drugi protokoli (grb/cifra po telefonu, mentalni poker, sheme za deljenje skrivnosti, kode za overjanje, časovni žigi, vizualna kriptografija, dokaz brez razkritja znanja)— Kvantna kriptografija • Računalniška varnost— Varnost programov (hrošči, virusi, zlonamerna koda)— Varnost podatkovnih baz (anonimizacija)— Varnost operacijskih sistemov (MS Win, 	<p>Information/Computer Security describes all preventive measures, procedures and means to ensure access to Information Systems and their contents in order to prevent their unauthorized use. Cryptography provides maximum security while at the same time preserve the flexibility of digital media. It forms the foundation of Information Society (objectives: privacy, data integrity, digital authentication/signatures, digital cash, and other cryptographic protocols, it covers: Mathematics, Computer Science, Electrical Engineering, Finances, Policy, Defense, etc.). The course will cover the following topics:</p> <ul style="list-style-type: none"> • Symmetric cryptography – Classical Ciphers and History of Cryptography – Kerckhoff Principle and various attacks on cryptosystems – Shannon Theory of Information and Entropy (Perfect, Computational and Provable Security) – Block Ciphers (DES/IDEA, AES and finalists, Linear and Differential Analysis) – Stream Ciphers/PRNG (RC4, LFSR and Berlekamp-Massey algorithm,...), – Cryptoanalysis, Statistical Methods – Hash Functions (MD/SHA, HMAC...) and Authentication Codes (MAC), Birthday Paradox Attacks, new attacks,... • Public-key cryptography (Asymmetric Cryptography) – Perfect Security (Computational, Unconditional and Provable Security) – Public-Key Cryptosystems, One-Way
---	---

<p>Unix/Linux, liveCD)– Varnost mrežnih komunikacij (požarni zidovi, VPN, IPSec, SSL)– Zasebnost v računalništvu (žetoni/pametne kartice, RFID kartice)– Upravljanje s ključi (certifikati, CA, PKI, X.509)– Učinkovite in varne implementacije kriptosistemov (napadi s stranskim kanalom in obramba pred njimi)– Upravljanje varnosti v praksi (varnostne politike, nadzor)– Patenti in standardi (ISO, IEEE, IETF)</p>	<p>Functions and related problems in Number Theory (Primality Testing, Integer Factorization, Discrete Logarithm Problem)</p> <ul style="list-style-type: none"> – Digital Signatures (RSA, DSA, one-time, blind, group etc.) – Key Agreement Protocols (Diffie-Hellman, ElGamal, Kerberos, STS) – Identification Schemes for humans and devices (challenge/response...) – Other protocols (head/tail over the phone, mental poker, Secret Sharing Schemes, Authentication Schemes, Timestamps, Visual Cryptography, Zero-Knowledge Proofs) – Quantum Cryptography • Computer/information security – Security of programs (bugs, viruses, malicious code) – Security of databases (anonymization) – Security of OS (MS Win, Unix/Linux, liveCD) – Security of network communication (firewalls, VPN, IPSec, SSL) – Privacy in Computer Science (tokens/smart cards, RFID cards) – Key management (certificates, CA, PKI, X.509) – Efficient and secure implementations of cryptosystems (sidechannel attacks and defenses against them)
---	--

	<ul style="list-style-type: none"> – Real time security management (security policy, monitoring)– Patents and standards (ISO, IEEE, IETF)
--	---

Temeljni literatura in viri / Readings:

– D. Stinson, Cryptography: Theory and Practice, tretja izdaja, Chapman and Hall/CRC, 2006.– A. Menezes, P. van Oorschot in S. Vanstone, Handbook of Applied Cryptography, CRC Press, 1997 (peti ponatis 2001).– C.P. Pfleeger in S.L. Pfleeger, Security in Computing, četrta izdaja, Prentice Hall, 2006.

Cilji in kompetence:

Študent se spozna z osnovami kriptografije in računalniške varnosti.

Objectives and competences:

Introduction to Cryptography and Computer Security.

Predvideni študijski rezultati:

Znanje in razumevanje: Študent razume osnovne probleme računalniške varnosti in v podrobnosti delovanje najbolj znanih kriptosistemov sistemov ter je sposoben povezovati obe področji, predlagati rešitve in implementirati oziroma vzdrževati kriptografske sisteme. Uporaba: Sposobnost opredelitve (definicije) problema, pravilno ovrednotenje s strokovnega vidika (tako s kriptografskega kot varnostnega) ter sposobnost predlagati/ovrednotiti učinkovito rešitev. Refleksija: Spoznavanje in razumevanje uglešenosti med teorijo in njeno rabo na konkretnih primerih računalniške varnosti. Prenosljive spretnosti - niso vezane le na en predmet: Predmet je osnova za številne

Intended learning outcomes:

Knowledge and understanding: Student masters the basic problems of computer security and the detailed structure of the most famous cryptosystems. Student is able to connect these areas, propose specific solutions and implement or maintain cryptosystems. Application: The ability to define the problem, correct evaluation of a professional point of view (such as the cryptographic security) and the ability to propose/evaluate an effective solution. Reflection: Learning and understanding the soundness between theory and practice applied to specific examples of computer security. Transferable skills: This course is a foundation for several courses that study computer systems and networks,

predmete, ki preučujejo računalniške sisteme in mreže, (tele)komunikacijo, digitalno forenziko, elektronsko in mobilno poslovanje, ... Med pridobljene spremnosti štejejo teoretične osnove za inženirsko reševanje različnih praktičnih problemov, ki se pojavljajo v problemih iz računalniške varnosti in kriptografije.

telecommunications, digital forensic, electronic and mobile commerce etc. Student will attain theoretical fundation for variety of practical problems that are encountered in the field of computer security and cryptography.

Metode poučevanja in učenja:

Predavanja, vaje, domače naloge, seminarji, konzultacije, laboratorijsko delo. Poseben poudarek je na sprotnjem študiju in na skupinskem delu pri vajah in seminarjih. Ogledali si bomo tudi kakšen video.

Learning and teaching methods:

Lectures, tutorials, assignments, seminars, office hours, lab work. There will be a special emphasis on real-time studies and team work (tutorials and seminars). We will occasionally watch a video material related to the course material.

Načini ocenjevanja:

Delež (v %) /

Weight (in %)

Assessment:

Način (pisni izpit, ustno izpraševanje, naloge, projekt):Sprotno preverjanje (domače naloge, kolokviji in projektno delo) Končno preverjanje (pisni in ustni izpit)Ocene: 6-10 pozitivno, 1-5 negativno (v skladu s Statutom UL)

50%

50%

Type (examination, oral, coursework, project):Continuing (homework, midterm exams, project work)Final (written and oral exam)Grading: 6-10 pass, 1-5 fail (according to the rules of University of Ljubljana)
