

UČNI NAČRT PREDMETA / COURSE SYLLABUS (leto / year 2016/17)											
Predmet:	Logika v računalništvu										
Course title:	Logic in computer science										
Študijski program in stopnja Study programme and level	Študijska smer Study field		Letnik Academic year	Semester Semester							
Interdisciplinarni magistrski študijski program Računalništvo in matematika	ni smeri		1 ali 2	prvi ali drugi							
Interdisciplinary Master's study programme Computer Science and Mathematics	none		1 or 2	first or second							
Vrsta predmeta / Course type	izbirni / elective										
Univerzitetna koda predmeta / University course code:	M2839										
Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS					
45		30			105	6					
Nosilec predmeta / Lecturer:	prof. dr. Andrej Bauer										
Jeziki / Languages:	Predavanja / Lectures:	slovenski / Slovene, angleški / English									
	Vaje / Tutorial:	slovenski / Slovene, angleški / English									
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:										
Vpis v letnik študija.	Enrolment in the programme.										
Vsebina:	Content (Syllabus outline):										

<p>Vsebina je razdeljena na obvezni del in na izbrana poglavja. Obvezni del:</p> <p>Sintaksa, formalni sistem, vezane spremenljivke, substitucija.</p> <p>Lambda-račun in preprosti tipi.</p> <p>Naravna dedukcija, izjavni račun, predikatni račun. Dokazni termi (proof terms).</p> <p>Izbrana poglavja:</p> <p>Curry-Howardova korespondenca</p> <p>Konstruktivna interpretacija logike, njen pomen za računalništvo.</p> <p>Časovna logika in uporaba v računalništvu.</p> <p>Modalna logika in uporaba pri modeliranju znanja.</p> <p>Ostali računi: pi-račun , dogodkovni račun ipd.</p> <p>Dokazovalniki izrekov.</p>	<p>The course is divided into core and optional parts. Core part:</p> <p>syntax, formal system, bound variables, substitution.</p> <p>Lambda-calculus and simple types.</p> <p>Natural deduction, propositional and predicate calculus. Proof terms.</p> <p>Optional parts:</p> <p>Curry-Howard correspondence</p> <p>Constructive interpretation of logic, and its significance for computer science.</p> <p>Temporal logic and its use in computer science.</p> <p>Modal logic and its use in knowledge modeling.</p> <p>Other calculi: pi-calculus, event calculus, etc.</p> <p>Automated theorem proving.</p>

Cilji in kompetence:

Objectives and competences:

Cilj predmeta je študente spoznati s povezavami med logiko in računalništvom, saj je logika na mnogih področjih računalništva nepogrešljivo orodje. Študent bo spoznal matematično ozadje iz področja logike, ki ga bo nato lahko učinkovito uporabljal pri reševanju računalniških nalog.

The objective is to show students how logic and computer science are connected, as logic is an essential tool in many areas of computer science. Students will obtain basic mathematical and logical knowledge, which they will be able to use at solving computer-science tasks.

Predvideni študijski rezultati:

Znanje in razumevanje osnov matematične logike, predvsem v povezavi z računalništvom.

Intended learning outcomes:

Knowledge and understanding of basics of mathematical logic, especially in relation to computer science.

Metode poučevanja in učenja:

Predavanja, vaje, konzultacije.

Learning and teaching methods:

Lectures, tutorials and consultations.

Načini ocenjevanja:

Delež (v %) /

Weight (in %)

Assessment:

Način (pisni izpit, ustno izpraševanje, naloge, projekt):		Type (examination, oral, coursework, project):Continuing (homework, midterm exams, project work)Final (written and oral exam)
Sprotno preverjanje (domače naloge, kolokviji in projektno delo)		Grading: 6-10 pass, 1-5 fail (according to the rules of University of Ljubljana)
Končno preverjanje (pisni in ustni izpit)	50%	
Ocene: 6-10 pozitivno, 1-5 negativno (v skladu s Statutom UL)	50%
