

UČNI NAČRT PREDMETA / COURSE SYLLABUS (leto / year 2016/17)						
Predmet:		Analiza 2a				
Course title:		Analysis 2a				
Študijski program in stopnja Study programme and level		Študijska smer Study field		Letnik Academic year	Semester Semester	
Enoviti magistrski študijski program Pedagoška matematika		ni smeri		2	prvi	
Integrated Master's study programme Pedagogical Mathematics		none		2	first	
Vrsta predmeta / Course type				obvezni / compulsory		
Univerzitetna koda predmeta / University course code:				M0547		
Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS
60		45			135	8
Nosilec predmeta / Lecturer:		prof. dr. Miran Černe, prof. dr. Barbara Drinovec Drnovšek, prof. dr. Franc Forstnerič				
Jeziki / Languages:		Predavanja / Lectures:		slovenski / Slovene		
		Vaje / Tutorial:		slovenski / Slovene		
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:				Prerequisites:		
Vpis v letnik študija.				Enrolment in the programme.		
Opravljen predmet Analiza 1.				Completed course Analysis 1.		
Vsebina:				Content (Syllabus outline):		

<p>Funkcije več spremenljivk. Zveznost. Parcialni odvodi in diferenciability. Jacobijeva matrika in determinanta. Diferencial sestavljene funkcije. Izrek o implicitni in inverzni preslikavi. Višji parcialni odvodi. Taylorjeva formula. Prosti in vezani ekstrema.</p> <p>Integrali s parametrom, zveznost in odvedljivost. Fubinijev izrek. Klasične Fourierove vrste. Fourierova transformacija. Osnovne lastnosti. Inverzna formula. Plancherelov izrek.</p> <p>Večkratni Riemannov integral. Lastnosti. Množice z ničelnim volumnom in mero. Izrek o obstoju integrala. Prevedba na večkratni integral. Posplošeni integrali. Uporaba integralov v geometriji in fiziki.</p>	<p>Functions of several variables. Continuity. Partial derivatives and differentiability. Jacobian matrix and determinant. Differential of a composed mapping. Implicit function theorem and inverse function theorem. Higher order partial derivatives. Taylor's formula. Free and constrained extrema.</p> <p>Parametric integrals, continuity and differentiability. Fubini's theorem. Classical Fourier series. Fourier transform. Elementary properties. Inverse formula. Plancherel theorem.</p> <p>Multiple Riemann integral. Properties. Sets with zero volume and measure. Theorem on the existence of integrals. Transformation into a multiple integral. Improper integrals. The use of integrals in geometry and physics.</p>

Apostol: Calculus II : Multi-Variable Calculus and Linear Algebra with Applications, 2nd edition, John Wiley & Sons, New York, 1975.</p> <p>J. E. Marsden, A. J. Tromba: Vector Calculus, 5th edition, Freeman, New York, 2004.</p> <p>Suhadolc: Integralske transformacije/Integralske enačbe, DMFA-založništvo, Ljubljana, 1994.</p> <p>A. Suhadolc: Metrični prostor, Hilbertov prostor, Fourierova analiza, Laplaceova transformacija, DMFA-založništvo, 1998</p>
--

Cilji in kompetence:

<p>Študent se seznanja z diferencialnim in integralnim računom funkcij več realnih spremenljivk.</p>
--

Objectives and competences:

<p>Student becomes familiar with the differential and the integral calculus of functions of several real variables.</p>

Predvideni študijski rezultati:

Intended learning outcomes:

Znanje in razumevanje: Razumevanje diferencialnega in integralnega računa funkcij več spremenljivk ter sorodnih tem. Uporaba razvitih metod v geometriji in naravoslovju.

Uporaba: Analiza 2a sodi med temeljne predmete pri študiju matematike vseh usmeritev in je pogoj za vpis predmetov Analiza 3, Teorija mere, Funkcionalna analiza, Verjetnost in statistika, Analiza na mnogoterostih.

Refleksija: Razumevanje teorije na podlagi primerov in uporabe.

Prenosljive spretnosti – niso vezane le na en predmet: Postavitev problema, izbira primerne metode, reševanje problema, analiza doseženega rezultata na primerih. Formulacija problemov v matematičnem jeziku. Spretnost uporabe domače in tuje literature.

Knowledge and understanding: Understanding of the differential and the integral calculus of functions of several variables and related topics. Application of these methods in geometry and natural science.

Application: Analysis 2a is one of the fundamental courses in mathematical studies. It is a prerequisite for the courses Analysis 3, Measure theory, Functional analysis, Probability and statistics, Analysis on manifolds.

Reflection: Understanding of the theory based on examples and applications.

Transferable skills: The ability to design the problem, select an appropriate method, solve the problem, and analyse the results on test cases. The ability to formulate a problem in mathematical language. Skills in using the domestic and foreign literature.

Metode poučevanja in učenja:

Predavanja, vaje, domače naloge, konzultacije

Learning and teaching methods:

Lectures, exercises, homework, consultations

Načini ocenjevanja:

Delež (v %) /
Weight (in %)

Assessment:

Način (pisni izpit, ustno izpraševanje, naloge, projekt):

2 kolokvija namesto izpita iz vaj, izpit iz vaj,

izpit iz teorije

ocene: 1-5 (negativno), 6-10 (pozitivno) (po Statutu UL)

50%

50%

Type (examination, oral, coursework, project):

2 midterm exams instead of written exam, written exam

oral exam

grading: 1-5 (fail), 6-10 (pass) (according to the Statute of UL)
